# **1 Welcome to EMS Data Export!**

**EMS Data Export for SQL Server** is a powerful program to export your data quickly from SQL Server databases to any of 20 available formats, including MS Access, MS Excel, MS Word (RTF), HTML, XML, PDF, TXT, CSV, DBF, ACCDB and more. Data Export for SQL Server includes a wizard which allows you to set export options for each table visually (destination file name, exported fields, data formats, and many others) and a command-line utility to export data from tables and queries in one-touch.

Visit our web-site: <u>https://www.sqlmanager.net/</u> for details.

## **Key features**

- Exporting data to most popular formats: MS Excel, MS Access, MS Word, RTF, HTML, PDF, XML, TXT, DBF, CSV, ODF, SYLK, DIF, LaTeX, SQL, ACCDB, Clipboard and others
- Unicode support
- Exporting data from several tables, views or queries at the same time
- Selecting fields to export and changing their order
- Adjustable parameters for each exported table and specific parameters for each output format
- Saving all export parameters set on current wizard session to the configuration file
- Command-line utility to automate your export jobs using the configuration file
- Latest SQL Server version support
- User-friendly localizable wizard interface

- Support for Unicode object names implemented.
- Support for Windows 11 ARM implemented.
- SFTP implemented for uploading files.
- Temporary files are now removed from TEMP folder automatically.
- The issue of exporting images into DOCX files resolved.
- Many other improvements and bug-fixes.

# **1.2** System requirements

8

- Microsoft® Windows XP, Microsoft® Windows 2003 Server, Windows® 2008 Server, Microsoft Windows Server 2008 R2, Microsoft Windows Server 2012, Microsoft Windows Server 2012 R2, Microsoft Windows Server 2016, Microsoft Windows Vista, Microsoft Windows 7, Microsoft Windows 8/8.1, Microsoft Windows 10, Microsoft Windows 11, Microsoft Windows 11 ARM
- 512 MB RAM or more
- 50 Mb of available HD space for program installation
- Microsoft Data Access Components (MDAC) or SQL Server Native Client
- Possibility to connect to any local or remote SQL Server<sup>™</sup>
- Supported MS SQL Server versions: from 2000 up to 2020

## 1.3 Installation

9

If you are installing Data Export for SQL Server for the first time on your PC:

- download the Data Export for SQL Server distribution package from the <u>download page</u> available at our site;
- unzip the downloaded file to any local directory, e.g. C:\unzipped;
- run *MsExportSetup.exe* from the local directory and follow the instructions of the installation wizard;
- after the installation process is completed, find the Data Export shortcut in the corresponding group of Windows Start menu.

If you want to **upgrade an installed copy of Data Export for SQL Server** to the latest version:

- download the Data Export for SQL Server distribution package from the <u>download page</u> available at our site;
- unzip the downloaded file to any local directory, e.g. C:\unzipped;
- close Data Export application if it is running;
- run *MsExportSetup.exe* from the local directory and follow the instructions of the installation wizard

## **1.4 How to buy Data Export**

All purchases are provided by **PayPro Global** registration service. The **PayPro Global** order process is protected via a secure connection and makes on-line ordering by credit/ debit card quick and safe.

**PayPro Global** is a global e-commerce provider for software and shareware sales via the Internet. It accepts payments in US Dollars, Euros, Pounds Sterling, Japanese Yen, Australian Dollars, Canadian Dollars or Swiss Franks by Credit Card (Visa, MasterCard/EuroCard, American Express, Diners Club), Bank/Wire Transfer.

If you want to review your order information, or you have questions about ordering or payments please visit our <u>PayPro Global Shopper Support</u>, provided by **PayPro Global**.

Please note that all of our products are delivered via ESD (Electronic Software Delivery) only. After purchase you will be able to immediately download the registration keys. Also you will receive a copy of registration keys by email. Please make sure to enter a valid email address in your order. If you have not received the keys within 2 hours, please, contact us at sales@sqlmanager.net.

To obtain more information on this product, visit us at <u>https://sqlmanager.net/en/</u>products/mssql/dataexport

\*EMS Maintenance Program provides the following benefits:

- Free software bug fixes, enhancements, updates and upgrades during the maintenance period
- Free unlimited communications with technical staff for the purpose of reporting Software failures
- Free reasonable number of communications for the purpose of consultation on operational aspects of the software

After your maintenance expires, you will not be able to update your software or get technical support. To protect your investments and have your software up-to-date, you need to renew your maintenance.

You can easily reinitiate/renew your maintenance with our online, speed-through

Maintenance Reinstatement/Renewal Interface. After reinitiating/renewal you will receive a confirmation e-mail with all the necessary information.

Data Export 2011 for SQL Server	Version 3.3.0.1	February 17, 2010
Data Export 2007 for SQL Server	Version 3.2.0.1 15	February 25, 2009
Data Export 2007 for SQL Server	<b>Version 3.1.0.1</b>	May 22, 2008

## Version 3.7.4

- Support for PostgreSQL 13 implemented.
- Added support for MySQL 8.
- Resolved error of connecting to SQL Server with TLS 1.2.
- Erroneous table name in SQL output fixed.
- Invalid call of procedures fixed.
- Other minor fixes.

## Version 3.7.3

- SQL Server. Added support for Azure databases.
- BOM mark is now optional for SQL format.
- SQL Server. Connection to SQL Server 2017 with TLS is established correctly now.
- Fields order was saved incorrectly into templates. Fixed now.
- Automatic calculation of width for DOC fields has been improved.
- Some parameters for XLS format were not saved in template. Fixed now.
- PDF orientation was not applied correctly in the command line mode. Fixed now.
- Renamed fields were not saved in template for CSV. Fixed now.
- Queries were not loaded correctly in some cases. Fixed now.
- Schema names were not exported into SQL format with "Apply to all exported objects" option enabled. Fixed now.
- Other fixes and improvements.

## Version 3.7.2

- BLOB fields can be exported to Base64 strings for text formats now.
- Support for MS Access 2016 has been added.
- Automatic search for MS SQL servers in the network has been improved.
- Adding of BOM is optional now.
- The errors in using Before export script have been fixed.
- The message about deleted tables was not added to the log. Fixed now.
- The error of exporting view data has been fixed.
- Dates were incorrectly exported to XLSX in some cases. Fixed now.
- Data was not exported correctly to TXT with "User-defined column width" option on. Fixed now.
- Many other improvements and bugfixes.

## Version 3.7.1

- Support of the latest version of OpenSSH added.
- Memory usage has been improved.
- The template was loaded incorrectly with Studio. Fixed now.
- Data from views was incorrectly exported in console version. Fixed now.
- Now timestamp format in exported file name can be adjusted.
- User-defined field formats were not loaded from the template. Fixed now.
- Many other improvements and bug-fixes.

٠

## Version 3.7.0.1

- $\underline{\text{DOCX}}$  [85]. The possibility to insert images from BLOB-fields to the table is implemented.
- XML 781. Export of binary data from BLOB-field with HEX and Base64 format is implemented.
- Numeric template and date and time <u>template formats</u> [89] refer to the standard Windows formats.
- Passive connection mode is implemented when uploading file to FTP-server.
- XLS [47]. When adding the hyperlink to another \*.xls file, at times the link turned out to be broken. Fixed now.
- <u>SQL</u>76. When inserting the large number of records, "Out of memory" error occurred. Fixed now.
- <u>MDB</u>[60], <u>ACCDB</u>[60]. Integer type fields were exported as text. Fixed now.
- $\underline{\text{CSV}}$  [74]. The export to UTF-8 coded files did not work. Fixed now.
- XML 78. When exporting data with spaces, ordinary spaces were replaced with nonbreaking spaces. Fixed now.
- Other improvements and bugfixes.

## Version 3.6.0.1

- Added the possibility to upload the exported files to FTP server.
- Added the possibility to add date/time to the exported file name.
- Added the possibility to execute <u>SQL scripts</u> abefore and after exporting the object.
- Now the program <u>template</u> [96] is created as a single file.
- Now the localization is also available in the console version.
- Now the binary data can be exported as HEX.
- Export to SQL 76. Added the possibility to create a single INSERT statement.
- Export to Excel (xls) [47]. Now you can set the specified number of rows to split the exported data into the worksheets in Excel.
- Now you can save changes to a template without recalling the save dialog.
- Loading from a template caused SQL queries corruption. Fixed now.
- Connecting to a server using SQL Server Native Client 2008 caused the error. Fixed now.
- The "Connection Timeout" parameters were not applied. Fixed now.
- Other minor improvements and bugfixes.

## Version 3.5.0.1

- Added the possibility to <u>export data</u> [38] to MS Access 2007 (\*.accdb Microsoft Access Database Engine 2010 Redistributable is required).
- Added support of Microsoft SQL Server 2012
- Now the Help file is opened in the selected language of the program.

- Added the context menu for <u>SQL Query Editor</u> 351: Copy, Paste, Select All, Save as default query.
- Added the possibility to save and copy the Export Process log [95] to the clipboard.
- There was a memory leak when exporting to Excel 2007. Fixed now.
- When launching two or more instances of the export console simultaneously specifying an individual log file for each instance, the log file was created for the first instance only. Fixed now.
- When exporting more than 2 GB of data to MS Access, a user-friendly error message is generated.
- The Export Process log [95] did not support Unicode characters. Fixed now.
- Other improvements and bugfixes.

## Version 3.4.0.7

- The speed of export to CSV, Text and XML formats has been considerably increased.
- The console version now displays the progress of the export process.
- The export into SQL format on Windows 7 resulted in the Access Violation error. Fixed now.
- When exporting into an existing table of MS Access, an error occurred. Fixed now.
- When exporting into the PDF format, the right and center alignment worked incorrectly. Fixed now.
- Now when exporting into PDF, lines with a large number of characters are split and placed correctly without overlapping the neighboring cells.
- The interface language chosen for the utility was not saved. Fixed now.
- Now the non-allowed characters in the automatically generated names are replaced by the underscore.
- Some other improvements and bugfixes.

## Version 3.3

- Autofill host list option is added
- When exporting from a SQL query, the query text can be added both to *Header* and *Footer*
- Some visual changes are introduced; the sizes of forms/form parts are saved now
- Fixed the bug, connected with writing the rows number to the DBF file header
- It is now possible to define size and decimal for float fields when exporting to the DBF file
- An error occurred on exporting more than 65536 records to Excel 97-2003. Fixed now
- Decimal fields used to be exported improperly. Fixed now
- Some other improvements and bugfixes

## Version 3.2

- The utility now supports SQL Server 2008
- When exporting data to SQL Script, BLOB (MEMO, BLOB, CLOB, etc.) data is formatted according to the destination server syntax
- Added the possibility to set page orientation when exporting data to MS Word 2007 [85]
- When a <u>template</u> was used for export, tables weren't displayed at Step 5. Fixed now
- Some other improvements and bugfixes

## Version 3.1

- Added the possibility to select file encoding when exporting to <u>TXT</u> [73] (ANSI, OEM, MAC, UTF8, UTF16, UTF32)
- Export to <u>SQL script</u> [76]: if the source DBMS is selected as the destination server, the syntax of the CREATE TABLE statement completely complies with the source DBMS specifications
- Export to <u>SQL script</u> [76]: added the possibility to generate the 'IDENTITY\_INSERT' SQL statement for export to MS SQL script
- Now the 'Destination Directory' value is saved to the <u>template</u> and is restored when the template is loaded
- The DBF files created by the utility were larger in size than required, as the size of all created char fields was set to 254. Fixed now
- Other minor improvements and bug-fixes

Older version history is available at <a href="http://www.sqlmanager.net/products/mssql/dataexport/news">http://www.sqlmanager.net/products/mssql/dataexport/news</a>

# 1.7 EMS Data Export FAQ

Please read this page attentively if you have questions about Data Export for SQL Server.

## **Table of contents**

- What is EMS Data Export for SQL Server?
- What do I need to start working with EMS Data Export for SQL Server? 17
- What is the difference between the Export feature of SQL Manager for SQL Server and the Data Export for SQL Server standalone utility?
- Are there any limitations implied in the trial version as compared with the full one?
- What is the easiest way to configure the template files for the Data Export console application?
- I work behind a firewall (router). Can EMS Data Export connect to a remote SQL Server server?
- How to connect to a named instance of SQL Server in EMS Data Export for SQL Server? [18]
- When connecting to SQL Server I get an error "SQL Server does not exist or access denied". What is wrong? [18]
- I can access my server via an alternative port. I have searched for a setting in EMS Data Export for SQL Server to alter the connection port, but have not yet been able to locate this. How would I go about altering this port? [18]

## **Question/answer list**

- Q: What is EMS Data Export for SQL Server?
- A: EMS Data Export for SQL Server is a powerful program to export your data quickly from SQL Server databases to any of 20 available formats, including MS Access, MS Excel, MS Word (RTF), HTML, XML, PDF, TXT, CSV, DBF and others. Data Export for SQL Server includes a wizard [27] which allows you to set export options for each table visually (destination file name, exported fields, data formats, and much more) and a command-line utility [106] to export data from tables and queries in one-touch.
- Q: What do I need to start working with EMS Data Export for SQL Server?
- A: First of all, you must have a possibility to connect to some local or remote SQL Server to work with Data Export. You can download SQL Server from <u>https://www.microsoft.</u> <u>com/downloads/</u>. Besides, you need your workstation to satisfy the <u>system</u> <u>requirements</u> of Data Export for SQL Server.
- *Q*: What is the difference between the Export feature of SQL Manager for SQL Server and the Data Export for SQL Server standalone utility?
- A: First of all, Data Export for SQL Server works faster as it is a considerably lighter application. Besides, it provides additional features for query building, namely:
  - export data from several tables simultaneously;
  - export data from tables [33] and queries [35] selected from different databases;
  - the command-line version of the utility to export data using the <u>configuration</u> [96] ( <u>template</u> [96]) file with all export settings.
- Q: Are there any limitations implied in the trial version as compared with the full one?
- A: Actually the trial version of the utility only allows you to export 20% of records at a time. In spite of this limitation, you can test all the features implemented in Data

Export for SQL Server within the 30-day trial period.

- Q: What is the easiest way to configure the template files for the Data Export console application?
- A: You can configure the template files for each table visually using the Data Export <u>Wizard application</u> [27]. Set the required export options and select the Tools | Save Template menu item on <u>Step 8</u> [91] or <u>Step 9</u> [95] of the wizard. All the options will be saved to the template file which can be used by the <u>console application</u> [106].
- Q: I work behind a firewall (router). Can EMS Data Export connect to a remote SQL Server server?
- A: Yes, but to do this, you should open the port where SQL Server works (1433 by default) on your firewall and on the firewall of the remote network.
- Q:How to connect to a named instance of SQL Server in EMS Data Export for SQL Server?
- A:To connect to a named instance of SQL Server 2005 just enter instance name in after host name and back slash symbol in 'Host name' field at the Setting Connection Properties step. (For example: my\_server\my\_instance.)
  - To connect to a named instance of SQL Server 2000 you need:
  - Run SQL Server Client Network Utility (WINDOWS\\SYSTEM32\\cliconfig.exe) on client computer where Data Export for SQL Server runs.
  - Go to the second (Alias) tab of the Utility.
  - Add a new server alias with Server Name in form <server\_name>\\<instanse\_name> and TCP/IP as Network library.
  - Use the server alias name as host name in Data Export.
- Q: When connecting to SQL Server I get an error "SQL Server does not exist or access denied". What is wrong?
- A: Probably, your SQL Server is installed as a named instance (See Q. "<u>How to connect to</u> <u>a named instance of SQL Server in EMS SQL Manager for SQL Server?</u> [18]"). Besides, the following factors can be the reasons for connection problems:

- You are trying to connect to SQL Server beyond your local network, through firewall (See Q. "<u>I work behind a firewall (router). Can Data Export connect to a remote SQL Server?</u>[18]"

- Wrong login/password. Either you use SQL Server Authentication, but this authentication type is forbidden on the server, or you use Windows Authentication to connect to the server, but the login that corresponds to your domain name is absent on SQL Server.

- MDAC works incorrectly. Try to reinstall Microsoft Data Access Components.

- SQL Server works on a non-standard (other than 1433) port (See Q. "<u>I can access</u> my server via an alternative port. I have searched for a setting in the program to alter the connection port, but have not yet been able to locate this. How would I go about altering this port? [18]".

- There are no enabled client connection protocols. Or all enabled client connection protocols are disabled on server side. Use SQL Server Client Network Utility (WINDOWS\\SYSTEM32\\cliconfig.exe) for connection to SQL Server 2000 or lower or SQL Server Configuration Manager to enable appropriate protocols.

Q: I can access my server via an alternative port. I have searched for a setting in EMS

Data Import for SQL Server to alter the connection port, but have not yet been able to locate this. How would I go about altering this port?

A: To connect to SQL Server 2005 on alternative port do the following:

- Run SQL Server Configuration Manager on client computer where Data Export runs.

- Expand the SQL Native Client Configuration section.

- Select the Aliases section.

- Add a new server alias and set server name, port number and TCP/IP as Network library.

- Use the server alias name as host name in Data Export utility.

To connect to SQL Server 2000 on alternative port do the following:

- Run SQL Server Client Network Utility (WINDOWS\\SYSTEM32\\cliconfg.exe) on client computer where Data Export runs utility.

- Go to the second (Alias) tab of the Utility.

- Add a new server alias and set server name, port number and TCP/IP as Network library.

- Use the server alias name as host name in Data Export utility.

## PostgreSQL

## SQL Management Studio for PostgreSQL

EMS SQL Management Studio for PostgreSQL is a complete solution for database administration and development. SQL Studio unites the must-have tools in one powerful and easy-to-use environment that will make you more productive than ever before!

# 5

## EMS SQL Backup for PostgreSQL

Creates backups for multiple PostgreSQL servers from a single console. You can use automatic backup tasks with advanced schedules and store them in local or remote folders or cloud storages

#### SQL Manager for PostgreSQL

Simplify and automate your database development process, design, explore and maintain existing databases, build compound SQL query statements, manage database user rights and manipulate data in different ways.

#### Data Export for PostgreSQL

Export your data to any of 20 most popular data formats, including MS Access, MS Excel, MS Word, PDF, HTML and more

## Data Import for PostgreSQL

Import your data from MS Access, MS Excel and other popular formats to database tables via user-friendly wizard interface.

#### Data Pump for PostgreSQL

Migrate from most popular databases (MySQL, SQL Server, Oracle, DB2, InterBase/Firebird, etc.) to PostgreSQL.

#### Data Generator for PostgreSQL

Generate test data for database testing purposes in a simple and direct way. Wide range of data generation parameters.

#### DB Comparer for PostgreSQL

Compare and synchronize the structure of your databases. Move changes on your development database to production with ease.

## DB Extract for PostgreSQL

Create database backups in the form of SQL scripts, save your database structure and table data as a whole or partially.

#### **Tools & components**

#### Advanced Data Export for RAD Studio VCL

Advanced Data Export for RAD Studio VCL allows you to save your data in the most popular office programs formats.

## Advanced Data Export .NET

Advanced Data Export .NET is a component for Microsoft Visual Studio .NET that will allow you to save your data in the most popular data formats for the future viewing, modification, printing or web publication. You can export data into MS Access, MS Excel, MS Word (RTF), PDF, TXT, DBF, CSV and more! There will be no need to waste your time on tiresome data conversion - Advanced Data Export will do the task quickly and will give the result in the desired format.

### Advanced Data Import for RAD Studio VCL

Advanced Data Import for RAD Studio VCL will allow you to import your data to the database from files in the most popular data formats.

#### Advanced PDF Generator for RAD Studio

Advanced PDF Generator for RAD Studio gives you an opportunity to create PDF documents with your applications written on Delphi or C++ Builder.

## Advanced Query Builder for RAD Studio VCL

Advanced Query Builder for RAD Studio VCL is a powerful component for Delphi and C++ Builder intended for visual building SQL statements for the SELECT, INSERT, UPDATE and DELETE clauses.

#### Advanced Excel Report for RAD Studio

Advanced Excel Report for RAD Studio is a powerful band-oriented generator of template-based reports in MS Excel.

#### Advanced Localizer for RAD Studio VCL

Advanced Localizer for RAD Studio VCL is an indispensable component for Delphi for adding multilingual support to your applications.

## See also: How to buy Data Export 10

## 2.1.2 Step 1 - Setting connection options

At this step you should specify necessary settings to establish **connection** to the source SQL Server database.

🐺 Data Export for SQL Server – 🗆 🗙								×
Step 1 of 10								
Set SQL Server connect	tion options							
			Connection	Properties				
	Host	DOOM_SERVER\TSERV2005	~	Login	screens			
L	Authentication	SQL Server	~	Password	•••••			
Data Export								
for SQL Server								
SQL Server								
Help Tool	s 🔻				<< Back Nex	t>>	Clo	se

## **Connection settings**

Enter SQL Server host name in the **Host** field or select the needed host from the dropdown list. This list is formed using *SQL-DMO* components function -"ListAvailableSQLServers". If *SQL-DMO* components are not installed the "NetServerEnum" function from *netapi32.dll* is used. If neither SQL-DMO components, nor netapi32.dll are installed, the **Host** drop-down list will be empty when the program is launched for the first time, and filled with host names already registered in the program, during further launches.

Please note that if Microsoft® SQL Server<sup>™</sup> is installed as a named instance, you should specify 'Remote' as the connection type and enter the name, or IP address of your machine and the instance name in the 'Host' field in the following format: computer\_name\sqlserver\_instance\_name or ip\_address\sqlserver\_instance\_name (e.g. "MYCOMPUTER\SQLEXPRESS", "127.0.0.1\SQLEXPRESS" ).

Specify the type of SQL Server **authentication** to be used for the connection: *SQL Server* or *Windows* authentication. It is strongly recommended to avoid using SQL Server authentication with "sa" as the login.

If SQL Server has been selected as the **authentication** type, you should also provide

authorization settings: Login and Password.

If you are using the EMS SQL Management Studio for SQL Server version of Data Export for SQL Server then the **Select registered database** button is available. Click this button to pick a database already registered in the EMS SQL Management Studio in the <u>Select Host or Database</u> 32<sup>1</sup> dialog.

If you get any difficulties connecting to the database, it can be useful to look through  $\underline{FAQs}$  [17].

When you are done, press the **Next** button to proceed to the <u>next step</u> 33.

## 2.1.2.1 Selecting registered database

Use this dialog to select a database for exporting data. This dialog is available only in EMS SQL Management Studio version of Data Export for SQL Server.

□ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □						
🖨 🥃 doom_server\tserv2005						
AdventureWorks on doom_server\tserv2005						
🛛 😑 DemoDB on doom_server\tserv2005						
estDB on doom_server\tserv2005						
🛛 😑 xtraLargeDB on doom_server\tserv2005						
🖮 🥥 tio\sql2014						
AdventureWorks on tio\sql2014						
<u> </u>						
AdventureWorks on doom_server\tserv2005						

All databases registered in EMS SQL Management Studio for SQL Server are displayed in the list.

Select the necessary database and click the **OK** button.

Database registration information will be filled on the <u>first step</u> [30<sup>1</sup>] automatically.

## 2.1.3 Step 2 - Selecting tables

This step of the wizard allows you to select tables of the specified database to be exported.

## Database

Select the database from drop-down list.

## Schema

Select the required schema to export tables.

## **Destination directory**

Set the folder where the exported file(s) will be stored.

**Hint:** To select multiple tables, hold down the *Shift* or *Ctrl* key while selecting the table names.

**Note:** You can repeat the steps above with other databases to export data from multiple databases simultaneously.

🐺 Data Export for SQL Server				- 0	×

When you are done, press the **Next** button to proceed to the <u>next step</u> [35].

34	Data Export for SQL Server

## 2.1.4 Step 3 - Specifying queries

Use this step to define queries to export their results.

## Database

Select the database from drop-down list.

#### Schema

Select the required schema to create a query.

## Add Query

Click the button to add a query. Either you can right-click within the **Queries** list and select the **Add Query** context menu item.

#### **Query Text**

You can enter SQL text for each query directly using the editor area or load an existing query from an external \*.sql file by pressing the **Load Query** button.

While inputting query text, it is also possible to save your queries by clicking the **Save Query** button or clear the content of the editor by clicking the **Clear Query** button.

To rename a query, right-click it in the **Queries** list and select the **Rename Query** context menu item.

To delete a query, select it in the **Queries** list and press the **Remove Query** button, or right-click the query and select the **Remove Query** context menu item.

To delete all queries (i.e. empty the **Queries** list), click the **Section** Clear All button, or rightclick within the **Queries** list and select the **Remove All Queries** context menu item.

**Note:** If none of the tables was selected at the previous step, the **Next** button will be enabled only when the query is added.

🐺 Data Export for SQL Serve	er	-								
Step 3 of 10 Create queries for data export										
	Database AdventureV Schema ( dbo	WorksDW Query Text	~							
Data Export for SQL Server	Queries AdventureWorksDW	1 SELECT * FROM dbo.product; Cut Cut Copy Paste Select <u>A</u> ll Save As Default Query Load Save <u>C</u> lear								
		Clear Query Don't show this step anymore	>							
Help Tool:	5 🗸	<< Back Next >>	Close							

The **context menu** of query editor area contains most of the standard text-processing functions (*Copy*, *Paste*, *Select All*). You can also save your query as a default query by choosing the corresponding context menu item. It will be automatically copied to the <u>default query editor</u> 1031.

If you add a <u>query with parameters</u> [117], the **Input Parameters** dialog will appear on pressing the **Export** button at the <u>last step</u>[95]. You need to define parameters type and value at the corresponding fields.

평 Input	Parameters	5	×
Query_0			
country	🗌 Null	USA	
		OK Cance	el

**Don't show this step anymore** Use the option to disable this step. To enable the step use the appropriate option at the <u>Selecting skipped steps</u> for the <u>Preferences</u> dialog.

When you are done, press the **Next** button to proceed to the <u>next step</u> 38.

# 2.1.5 Step 4 - Selecting export data format

At this step you should select the destination format for exporting data.

Select a <u>table</u> [33] or <u>query</u> [35] in the **Exported Objects** list and set the appropriate option to select one of available output data formats: *MS Excel* 97-2003, *MS Access* 97-2003, *MS Word* 97-2003, *RTF*, *HTML*, *PDF*, *TXT*, *CSV*, *DIF*, *SYLK*, *LaTeX*, *XML*, *DBF*, *SQL*, *Clipboard*, *ODS*, *ODT*, *MS Excel*, *MS Word*, *MS Access*. For details refer to <u>Supported file formats</u> [113].

**Hint:** If more convenient, you can check the **Apply to all exported objects** box to set the specified destination format for all exported objects.

🗟 Data Export for SQL Server						
Step 4 of 10

by EMS Software Development	

#### **Add Query Text**

When exporting from query you can optionally add query text to the file header or footer. Use the corresponding buttons **Add Query Text** to add the specified query text or **Add Query Template** to add the query used in export.

**Note:** You can add the following macros: &N for total page count, &P for the current page number.

**Hint:** If more convenient, you can check the **Apply to all exported objects** box to set the specified captions for all exported objects.

See also:

Caption, width and align options 44 Setting format-specific options 46

## 44 Data Export for SQL Server

#### 2.1.7.2 Caption, width and align options

This tab allows you to customize fields of the result file: specify column *captions*, *width* and/or *align*.

### Allow captions

If this option is checked (default), the column captions are included into the result file.

Use the grid to set the captions of the result table columns. Default column captions correspond to the database field names.

For some of the export types columns **Width** and/or **Align** are also available. In the **Align** column you can select the text alignment for a certain column (*Left, Right* or *Center*). In the **Width** column you can set a numeric value defining the width of the result column.

**Hint:** You can reset the changes any time using the **Reset Item** and the **Reset All** buttons.

Use the **Font** and **Size** drop-down lists to select the *font* and *size* to be applied to the output text.

Use the buttons below to set *font color*, make text *bold*, *italicized*, *strikethrough* text, set *underline* effects, specify text *horizontal* and *vertical align*.

Press the  $\blacksquare$   $\blacksquare$   $\blacksquare$  buttons on the left to show/hide the borders they indicate.

Use the drop-down list for each border to select the *line type* and the  $\stackrel{\text{line}}{=}$  button on the right to select the *line color* for each border.

Use the drop-down list to select the preferable fill pattern type.

Press the 🆄 button on the left to set the background color for the fill pattern.

Press the 🎽 button on the right to set the foreground color for the fill pattern.

The aggregate functions from the Functions group allows you to count *Average* (AVG), *Maximum* (MAX), *Minimum* (MIN), or *Sum* (SUM) of the field values.

Selected aggregate function will be applied to the field and the result will be added to the additional row in the exported file.

At the **Sample Cell** section you can preview options changes.

Using the **Options** tab you can set *font* options, *border* and *fill* options for all **elements** of the Excel sheet (*header*, *caption*, *footer*, *aggregates*).

Excel Options Header & Footer Capt	tions & Width

#### 2.1.7.3.1.2 Extensions

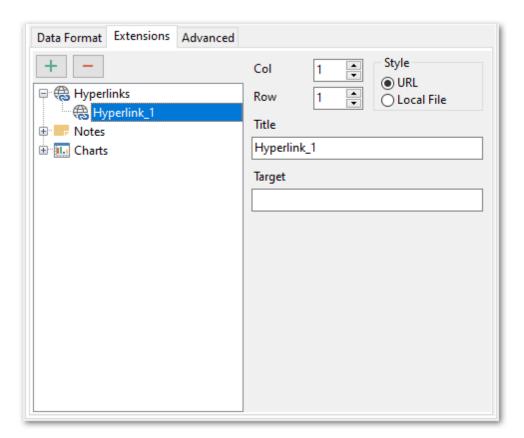

The **Extensions** tab provides an ability to add hyperlinks and notes and to any cell of target file, to specify a value of a cell and to create a chart.

Click the Plus button to add an element. Click the Plus button to delete an element.

- Hyperlinks 52
- <u>Notes</u> 53
- Charts 55

If you need to create a **hyperlink**:

- set the cell coordinates (*Col* and *Row*);
- specify whether this is a *local* link or URL;
- enter the *title* of the hyperlink;
- specify the *target* file location or address.

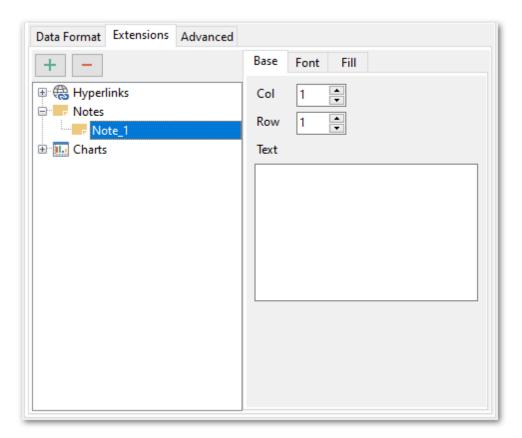

**Note:** Hyperlink title replaces the specified cell's data.

Notes are used to keep remarks or comments for a cell. Note's data are stored separately from ones of the cell. They are displayed as a triangle in the cell's upper right corner. Note appears as a hint when you point at the cell containing a note with a mouse.

#### Base

The tab allows you to set basic options for the note.

- set the cell coordinates (Col and Row);
- enter *text* of a note for the cell;

#### Font

The **Font** tab allows you to specify properties of the font that will be used in the output Excel file notes.

Use the **Font** and **Size** drop-down lists to select the *font* and *size* to be applied to the output text.

Use the buttons below to set *font color*, make text *bold*, *italicized*, *strikethrough* text, set *underline* effects, specify text *horizontal* and *vertical align*.

Base Font	Fill				
Font	Tahoma	$\sim$			
Size	8 ~				
A B I	<u>\$ U</u> <u>V</u> <u>U</u> <u>V</u>				
Orientation					
No rotation					
○ Top to bottom					
Counter clock wise					
○ Clock wise					

You also can select preferable text **Orientation**.

#### Fill

Use the **Fill** tab to set the note fill type and color.

Base	Font	Fill			
Fill T	Гуре				
09	Solid	(	Gradient		
	) Horizoi	ntal	🔿 Diagonal Down		
0	) Vertical		O From Corner		
C	) Diagon	al Up	⊖ From Center		
		ඵ	× ×		
Trans	Transparency				
0%			100%		

Select the fill type first: *Solid or Gradient*. The direction needs to be specified for gradient fill: *horizontal, vertical, diagonal (down, down), from corner or from center*.

Press the 🌁 button on the left to set the background color for the fill pattern.

Press the  $\stackrel{\text{\tiny{M}}}{=}$  button on the right to set the foreground color for the fill pattern.

Use **Transparency** slider to define visibility level of the note.

If you need to create a **chart**:

- enter the chart title;
- select the chart style (Column, Column 3D, Bar, Bar 3D, Line, Line Mark, Line 3D, etc.);
- set the legend position: Bottom, Top, Left, Corner or Right;
- specify if you want to show the legend;
- specify if you want to set the chart color automatically;
- define the chart *position* and *category labels* using the corresponding tabs.

Data Format Extensions Advanced	
+ -	Base Position Category Labels
Hyperlinks  Hyperlinks  Charts  Chart_1  Series	Title     Chart_1       Style     Column       Legend Position        Bottom     Top       Corner     Right       ✓ Show Legend     ✓ Auto Color

# Position

**Position** tab allows you to define chart placement and its size.

Base	Position	Category	y Labels	
PI	to Position acement Bottom		Right	
Left Top	1	Hei		▲ ▼ ▲
⊖ Cu	stom Posit	ion		
X1 Y1	1	▲ X2 ▼ Y2	1	A V A V

# **Auto Position**

# Bottom

The chart will be placed under the data.

# Right

The chart will be placed to the right from the data.

You also need to specify the distance between the chart and the data at the **Left** and the **Top** fields, and chart size at the **Height** and the **Width**.

# **Custom Position**

Specify absolute position by setting chart coordinates: X1, Y1, X2, Y2.

#### **Category labels**

Use this tab to define **Category labels**.

osition Category Labels
mn
~
om
1 🔺 Col 2 1 🛉
1 Row 2 1
11

# Column

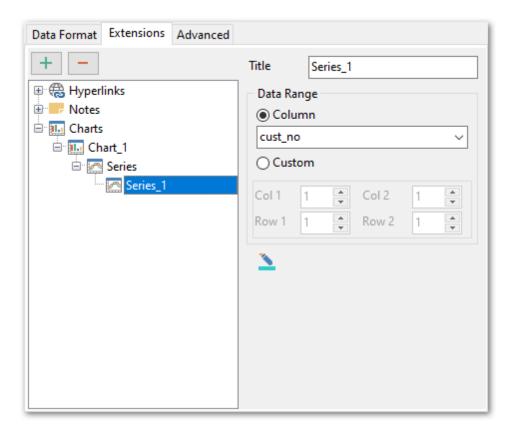

Use column values as chart category labels.

#### Custom

Define category label values range manually. Use *Col 1* and *Row 1* fields to specify upper left cell, and *Col 2* and *Row 2* fields to define the right bottom one. These cells form a square array of values that will be used as category labels.

# If you need to add series for the chart:

- add one or more series using the 
   button;
- enter the *titles*;
- set data ranges (select a column from the drop-down list or set the custom range);
- define colors for all the graphs.

#### 2.1.7.3.1.3 Advanced

The **Advanced** tab allows you to set a number of advanced options to be applied to the result MS Excel file.

Data Format Extensio	ns Advanced		
Page header	Department		
Page footer	Page &P of &N		
Sheet title	Sheet 1		
Split by rows	0		
Automatic column width			

# Page header

If necessary, enter some text for the page header.

#### Page footer

If necessary, enter some text for the page footer.

**Hint:** It is also possible to set macros in the **Page header** and **Page footer** fields: *&N* stands for the quantity of pages; *&P* - the number of the current page.

# Sheet title

Specify the sheet title for the target file.

# Split by rows

Use this field to define the number of rows on each sheet.

# Automatic column width

Enable this option if you want each column of the target file to be adjusted to the maximum number of characters in it.

#### 2.1.7.3.2 Access options

This tab allows you to set options for the target **MS Access** (\*.mdb) and **MS Access** (\*. accdb) file.

Set the name for the target table and specify whether the wizard should create a new table in the MS Access database if it does not exist yet, or use the existing table to export data into.

Apply to all exporte	d objects	Allow captions	
Access Options Ca	ptions		
Table options			
Password			
Table name	[address]		
🗹 Create table	if it doesn't exist		
Export Date	/Time fields as nvarchar		

### Password

Specify the database password if you are exporting data to an existing MS Access database which is protected by a password.

## Table Name

The name of the table within the target MS Access database.

#### Create table if it does not exist

Automatically creates the target table if it does not exist in the target database yet.

#### Export Date/Time fields as nvarchar

Enable the option to convert Date/Time data to nvarchar when exporting.

#### Apply to all exported objects

Enable this option to make settings common for all objects.

# See also:

	Reset Ite	em	Reset All

Press the 🌁 button on the left to set the background color.

Press the  $\stackrel{\text{\tiny{M}}}{=}$  button on the right to set the highlight color.

# Allow highlight

Enable this option to use the specified color in the result file as text highlight.

#### Allow background

Enable this option to use the specified color in the result file as background.

**Hint:** You can reset the changes any time using the **Reset Item** and the **Reset All** buttons.

At the **Sample** section you can preview options changes.

2.1.7.3.3.2 Strip data styles

Using the **Strip Styles** tab you can create a style template: set *font*, *size*, *background* and *foreground colors*, *text alignment*, *highlight* and save them.

If you have created or loaded more than one style template, they can be ignored, or used *column-by-column* or *row-by-row* (it depends on the **Strip Type** selection).

Use া 🔳 buttons to add/remove a style.

Use 主 🛃 buttons to reorder the style's list.

You can also save styles and load saved ones.

Fonts section allows you to define the selected item's font.

Specify the needed **Font Name** and **Font Encoding** from the appropriate drop-down lists. You can also define the **Font Size**.

You can change the font color by pressing the **Font Color** button.

# **Page Options**

# Page Size

Define the page size by choosing one of the standard page sizes from the drop-down list, or set the custom size by changing **Width** and **Height**. By default standard "A4" page size is set.

#### Units

Use this drop-down list to set the units of measurement for the page size and margins. *Inches, millimeters* and *dots* are available.

# Orientation

Select needed page orientation from this drop-down list.

#### **Margins**

Use this section to define page margins for the exported file.

#### **Grid Options**

Grid Options Pag	e Options	
Col spacing	3	
Row spacing	1	
Grid line width	1	

At this tab you can define Col spacing, Row Spacing and Grid Line Width.

**Note:** For your convenience the previews illustrating the changes are displayed in the **Sample** area.

# 2.1.7.3.8 SQL options

The **SQL Options** tab allows you to set options for SQL as the output format (as a set of INSERT statements).

Apply to all exported objects		
<u>SQL</u> Options Header	& Footer	
Destination server		
ANSI SQL-92	⊖ MS SQL	PostgreSQL
⊖ DB2	🔘 MySQL	
◯ InterBase/Firebird	🔘 Oracle	
Table options		
Table name	address	
Add 'Create Table'	statement	
- Commit options		
Commit after	0 🔹 record(s)	🗹 Commit after script
Commit statement	COMMIT;	
Other options		
Create multiple inser	t statement	
Export null values as	null	Statement term 🔅
Add byte order mark (BOM)		

#### **Destination server**

Select the ANSI SQL-92 standard or define the type of DBMS you need to export data for (to achieve maximum compatibility). The result script will be generated in compliance with the specifications of the selected server type:

- DB2
- InterBase/Firebird
- Microsoft® SQL Server
- MySQL
- Oracle
- PostgreSQL

#### **Table options**

This group allows you to add the *CREATE TABLE* statement to the result script, define the name for the table being exported and select SQL dialect.

### **Add 'IDENTITY\_INSERT' statement** (for export to MS SQL)

Allow explicit values to be inserted into the identity column of a table.

### **Commit options**

This group allows you to add the *COMMIT* statement after a defined number of records or at the end of the script. You can also define the commit statement (*COMMIT*; by default)

in the corresponding edit-box.

### **Other options**

### Create multiple insert statement

Check this option to perform insert operation using multiple insert statements.

### Export null values as

Specify the representation of NULL values in the result script.

## Statement term

Define the character denoting the end of each SQL statement (semicolon by default).

### Add byte order mark (BOM)

With this option enabled the byte order mark is added to each TXT file.

### XML type

Select the type of the result XML document: Datapacket 2.0 or Access.

### Export XSD schema

For the Access type you can optionally select to export XSD schema, which defines the way the elements and attributes will be represented in an XML document. It also advocates that the given XML document should be of a specific format and specific data type.

### Convert images to Bitmap

Check this option to convert images stored in the source table to the \*.png file format to ensure compatibility with MS Access database.

**Note:** Conversion between generic XML documents and documents of the *XML*-*Datapacket (CDS)* format can be performed with the help of XML Mapper by Borland®.

### 2.1.7.3.10 DBF options

This tab allows you to set options for the target **DBF** (\*.*dbf*) file.

Apply to all exporte	d objects
DBF Options Captio	ins
Precision options	
Float size	15 🔹
Float decimal	4
Encoding AN	SI 🗸

At the **DBF Options** tab you can define the precision for float fields. Use the **Float size** and **Float decimal** fields for this purpose.

### Encoding

Use the drop-down list to specify the preferable output file encoding. Possible values are: *ANSI, OEM, MAC, UTF-8, UTF-16, UTF-32*.

**Hint:** If more convenient, you can check the **Apply to all exported objects** box to apply changes made at this tab for all exported objects.

#### 2.1.7.3.11 Excel/ODS options

The **Excel (ODS) options** tab allows you to set options for the target **MS Excel (ODF Spreadsheets)** (\*.*xlsx*, \*.*ods*) file.

### Sheet name

Input custom name for the sheet in the result file.

You can customize **options** and **strip styles** using the corresponding sub-tabs:

- Options
   82
- <u>Styles</u> 83

Apply to all exported objects	🖂 Allow ca	aptions		
Excel 2007 Options Header & Footer   Cap	tions			
Options Styles HEADER CAPTION DATA FOOTER	Font Size S	round	Thin Wrap text	~
	Aa Zz			- 1
Sheet name EMS	Reset Ite	200	Reset All	
смо	11636(116	201	Heset All	

**Note:** For your convenience the previews illustrating the changes are displayed in the **Sample Text** area.

**Hint:** You can reset the changes any time using the **Reset Item** and the **Reset All** buttons.

2.1.7.3.11.1 Options

Using the **Options** tab you can set *font* and *border* options for all **elements** of the Excel / ODF sheet (*HEADER, CAPTION, DATA, FOOTER*).

### Sheet name

If necessary, you can specify the sheet name for the target Excel / ODF Spreadsheet file.

Use the **Font** and the **Size** drop-down lists to select the *font* and *size* to be applied to the output text.

Use the buttons below to set font color, make text bold, italic, strikethrough text, set underline effects, specify text horizontal and vertical align.

Font Border
Font Arial Size 10
Reset Item Reset All

### **Use background**

Enable this option to be able to change result file background color.

Press the 🌁 button on the left to set the background color.

You can reset the changes any time using the **Reset Item** and the **Reset All** buttons.

**Note:** For your convenience the previews illustrating the changes are displayed in the **Sample Text** area.

Enable the **I** Use Border option at the Border tab if it is needed.

Then define its color 🕍 and style.

🔽 Use Bord	er		
Border Color	aby	Border Width	1

2.1.7.3.11.2 Styles

Using the **Styles** tab you can create and save a style template: set *font*, *size*, *background color*, *text alignment*, *wrap text* options.

Use 🐏 🚍 buttons to add/remove a style. Use 💽 💽 buttons to reorder the style's list. You can also save styles and load saved ones.

If you have created or loaded more than one style template, they can be ignored, or used *column-by-column* or *row-by-row* (it depends on the **Strip Type** selection).

Options Styles	Font

	Reset Item Reset All
- Strip Type	
<ul> <li>None</li> </ul>	
🔘 Col	
─ Row	

Press the 🌁 button on the left to set the background color.

Press the  $\stackrel{\text{\tiny M}}{=}$  button on the right to set the highlight color.

### Use highlight

Enable this option to be able to select highlight color from the drop-down list.

### **Use background**

Enable this option to use the specified color in the result file as background.

**Note:** For your convenience the previews illustrating the changes are displayed in the **Sample Text** area.

### 2.1.7.3.12.3 Border

Using the  ${\bf Border}$  tab you can enable borders in the result Word / ODF text document and customize them.

Click the **Border Color** icon to select a color using the **Color** dialog where you can specify the required color from the palette.

# **Border Width**

Type in the preferable border width.

Options   Styles	Border
Vse Border	
Border Color	aby
Border Width	1

# 2.1.8 Step 7 - Setting base data formats

At this step you should define data formats of the exported fields.

### Data type formats

89

Use this group to define formats for the exported columns. You can keep the default format values or edit some of them, if necessary. See Format specifiers [110] for more details.

🐺 Data Export for SQL Serve	r			_		×
Step 7 of 10 Set base formats of dat	a types					
Data Export for SQL Server	Exported Objects AdventureWorksDW.dbo.DimC AdventureWorksDW.dbo.DimD AdventureWorksDW.dbo.DimEr AdventureWorksDW.dbo.DimPr	Column name PayFrequency	#,###,##0         #,###,##0.00         dd/MM/yyyy         h:mm         dd/MM/yyyy h:mm:ss         #,###,##0.00 P         null         olumn formats         Colu	b	#160 , true false Add Delete Edit Clear	
Help Tools	; 🗸		<	< Back Next >>	Clos	se

### **User-defined column formats**

Using this group you can also define your own formats for *numeric* and *Date/Time* column. These fields (if there are any in your source table) are available in the drop-down list at the top of the **User** group. Select a column from the **Column Name** drop-down list, then select its format from the **Column Format** drop-down list and click the **Add** button. The column and its format will be added to the list box below. To edit a column format, select the column in the list box and click the **Edit** button. To delete a format, click the **Delete** button. To clear the list box, click the **Clear** button.

**Hint:** If more convenient, you can check the **Apply to all exported objects** box to set the specified format for all exported objects.

### **Don't show this step anymore**

Use the option to disable this step. To enable the step use the appropriate option at the <u>Selecting skipped steps</u> for the <u>Preferences</u> dialog.

When you are done, press the **Next** button to proceed to the <u>next step</u> of .

90	Data Export for SQL Server

# 2.1.9 Step 8 - Setting common options

Use this step of the wizard to set common export options. The detailed description of these options is given below.

# File properties

# **Destination file**

Use this edit field to set the name of the output file. You can click the **Browse...** button to define it using the **Save As** dialog.

### Open file after export

If this option is checked, the result file will be opened with the currently associated program after the export operation is completed.

### Print file after export

If this option is checked, the result file will be sent to the default printer after the export operation is completed.

## **Use file name template**

If this option is checked then current date and time are added to the result file name.

🐺 Data Export for SQL Server	- D X
Step 8 of 10 Set export final options	
Exported Objects EMS.dbo.PAYMENT EMS.dbo.PRODUCT EMS.dbo.PROJECT EMS.dbo.PUBLISHERS	Apply to all exported objects File properties Destination File C:\Program Files (x86)\EMS\Data Export for SQL Server\PAYMEN Browse

Help Tools 🗸	On't show this step anymore          << Back

### **Constraints**

### Skip ... record(s)

Specifies the number of records to be skipped before export starts.

### Export empty data

The option indicates whether empty records should be exported.

### Export binary data to Base64

Check this option to encode binary data in the exported file as Base64.

### Export all records

Specifies that all records of the selected table will be exported.

### Export only ... record(s)

Specifies the number of records to be exported.

### Save Export Options... / Load Export Options...

Use these buttons to save / load all export settings to/from an external configuration file. For details refer to <u>Configuration file formation</u>.

### **Upload options**

Select the protocol in the **Upload mode** field to enable uploading of exported files to FTP server. After that define connection settings:

- Host is the name of the FTP server.
- **Port** indicates the port of the FTP server.
- **Path** is the the directory on the FTP server where you want to upload exported files.
- User stands for the user name on the machine with FTP server.
- **Password** is the user password.

Click the **Check connection** button to check connection to the FTP server with the settings defined above.

**Hint:** If more convenient, you can check the **Apply to all exported objects** box to set the specified options for all exported objects.

### Don't show this step anymore

Use the option to disable this step. To enable the step use the appropriate option at the <u>Selecting skipped steps</u> for tab of the <u>Preferences</u> all dialog.

When you are done, press the **Next** button to proceed to the <u>next step</u> of the wizard.

# 2.1.10 Step 9 - Defining scripts

This step of the wizard allows you to define scripts to be **executed before and after export process** for each table.

Select a table to define the script for. Type the text of the script to be executed before the export operation in the **Before export script** area, the script to be executed after the export operation in the **After export script** area. Select another table and add scripts for it, if necessary.

You can also save and load *Before export* and *After export* scripts using the corresponding **Save script...** and **Load script...** buttons. The **Clear** button erases the text and clears the current editor window.

Apply to all exported	objects		
	Before expo	ort script

96

# 2.2 Using configuration files (templates)

Data Export for SQL Server allows you to store its configuration settings in external \*.cfg files if you need to perform the data export process repeatedly.

You can load previously saved configuration settings to the application  $\frac{\text{wizard}}{28}$  if you need to make some changes before data export, or you can run it with the <u>console</u> application for quicker export.

Data Export templates are saved within the **Save template options** dialog. To open this dialog, press the **Tools** button and select the **Save Template** popup menu item. **Note:** You can save changes to a template without recalling the save dialog using the **Save Template As** popup menu item.

### File name

Specify the template file name and select its location using the  $\mathbf{k}$  button which calls the **Save As...** dialog.

### Comment

Specify custom comment for the template file if need.

Save template options	
<u>F</u> ile name

### Data Export for SQL Server

98

# 2.3 Setting program preferences

Data Export for SQL Server provides full customization of the program by setting various options within the **Preferences** dialog. This chapter is intended to inform you how to use all these options.

# **General options** 99

These options define general behavior of Data Export for SQL Server.

### Selecting skipped steps

Manage steps that are visible or hidden in the wizard.

### Default data formats 102

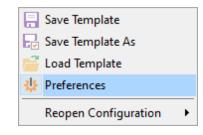

This page allows you to set default data formats.

# <u>Default query</u> 103

This page allows you to input a template for a new query that will appear at <u>Step 3</u> 35 of <u>Wizard Application</u> 27.

### Localization 104

This page allows you to select a language to be applied for your copy of Data Export for SQL Server.

### See also:

Working with wizard application[28]Using configuration files

© 1999-2025 EMS Software Development

# 2.3.1 Setting general options

# General

99

### Theme

Select the main color theme for the application: Light or Dark.

### Confirmation on exit

Enables/disables confirmation upon exiting the program.

### Save password

Setting this option allows you to save passwords used for access to the databases automatically upon closing the application. Please note that checking this option saves the latest password used for connection to the database.

### Format SQL values

The option determines whether SQL values (e.g. integer, float, currency, datetime, etc.) should be formatted according to the settings specified on the <u>Default formats</u> page.

### Show views

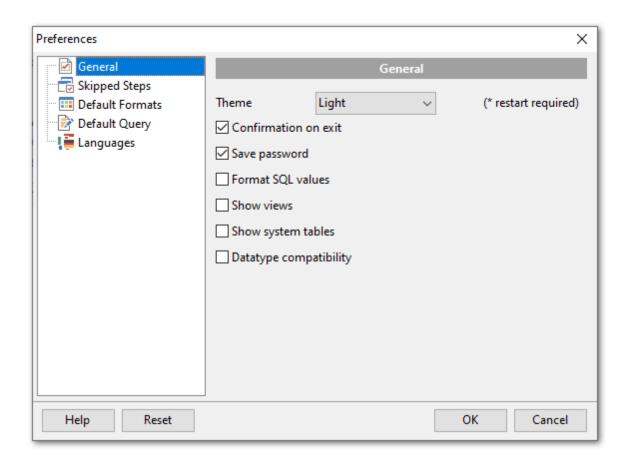

By setting this option on you can export data from views - they will appear in the list of available tables at <u>Step 2</u>[33] of the <u>Wizard application</u>[27].

### Show system tables

Enable this options if you need system tables to be added to the list at Step 2 33.

### **Datatype compatibility**

Set this option ON to enable compatibility between data types.

# See also:

<u>Setting default formats</u> 102 <u>Selecting skipped steps</u> 101 <u>Setting default query template</u> 103 <u>Selecting program language</u> 104

# 2.3.2 Selecting skipped steps

### **Skipped steps**

Use this option group to define the <u>Wizard application</u> 27 steps to be skipped. The steps presented in the list contain the **I Don't show this step anymore** that indicates whether this step should be skipped. Enabling steps marked as skipped is possible only in current dialog.

### Skip steps

This option determines the behavior of the *Next* and *Back* buttons. When this option is disabled, clicking the *Next* button leads to sequential passing through the list of exported objects. When this option is enabled, the steps checked on the page will be skipped.

# 3 Console application

Additionally to **the GUI version** which is implemented in the form of a <u>wizard application</u>  $\boxed{27}$ , the installation package of Data Export for SQL Server includes **the console version** which is intended for running from Windows command line with a <u>template</u>  $\boxed{96}$  file name used as the execution parameter. You can schedule exporting using *Scheduled Tasks* tool implemented in Windows.

# C:\Program Files\EMS\Data Export for SQL Server>MSExportC.exe\_

Data Export for SQL Server command line utility is intended for quick and powerful data export from SQL Server tables.

- Working with console application
- How to schedule console run 108
- Configuration file format 115

See also: Wizard application<sup>27</sup>

### 107 Data Export for SQL Server

# 3.1 Working with console application

All the export options are set in **configuration** (\*.*cfg*) files. A configuration (template) file can be also used in the **Console version** of Data Export for SQL Server.

To create a configuration (template) file, follow the instructions below:

- start Data Export Application wizard [27];
- set all the required options in all steps of the wizard;
- test the export process at the last step;
- save all export options in the <u>template</u> [96].

The easiest way to start Data Export for SQL Server console application is to double-click the generated *\*.cfg* template. The other way is to enter the command line and type the appropriate command.

### <u>Usage:</u>

<path to Data Export for SQL Server console application>\MsExportC.exe TemplateFile [B]

### TemplateFile

Stands for the path and the name of \*.cfg template file to be used as the console version execution parameter

### [-B]

Use this parameter in the command line to run the console version of Data Export for SQL Server in the background mode

### Example:

"C:\Program Files\EMS\Data Export for SQL Server\MsExportC.exe" "C: \EMS\DataExport\Example.cfg" -B

### **Using parameters in queries**

*MsExportC.exe* [Template file] -[Query name]:[Parameter name]=[Value] -[Query name]:[Parameter name]=[Value] etc. (see <u>Using query parameters</u>[117])

**Note:** The following exit codes can be returned by Data Export for SQL Server to the operating system after performing the latest task:

0 - successful completion;

- 1 error(s) occurred during task performing;
- 2 fatal error occurred. The task was not performed.

### See also:

<u>Working with wizard application</u> [28] <u>How to schedule console run</u>108

### Data Export for SQL Server

# 3.2 How to schedule console run

Here are the steps to schedule program run with standard Windows scheduler:

1. Set all options in the program and click Tools --> Save template on the last step..

2. Open the command line in Windows (type CMD in the Run... dialog).

3. Use the following command to run the console version with the saved template: cpath to Data Export for SQL Server console application>\MsExportC.exe TemplateFile [B]

For example:

108

"C:\Program Files\EMS\Data Export for SQL Server\MsExportC.exe" "C: \EMS\DataExport\Example.cfg" -B

4. Launch the standard Task Scheduler tool in Windows OS.

5. Set the command for exporting data as described above.

6. Set the schedule for the command execution.

7. Save the scheduled task.

### See also:

Working with console applicationIno?Configuration file format

# 4 Appendix

# 4.1 Format specifiers

The following format specifiers are supported in the format string:

### Float/Integer format

### 0

Digit place holder. If the value being formatted has a digit in the position where the '0' appears in the format string, then that digit is copied to the output string. Otherwise, a '0' is stored in that position in the output string.

### #

Digit placeholder. If the value being formatted has a digit in the position where the '#' appears in the format string, then that digit is copied to the output string. Otherwise, nothing is stored in that position in the output string.

### •

Decimal point. The first '.' character in the format string determines the location of the decimal separator in the formatted value; any additional '.' characters are ignored.

### ,

Thousand separator. If the format string contains one or more ',' characters, the output will have thousand separators inserted between each group of three digits to the left of the decimal point. The placement and number of ',' characters in the format string does not affect the output, except to indicate that thousand separators are wanted.

# E+

Scientific notation. If any of the strings 'E+', 'E-', 'e+', or 'e-' are contained in the format string, the number is formatted using scientific notation. A group of up to four '0' characters can immediately follow the 'E+', 'E-', 'e+', or 'e-' to determine the minimum number of digits in the exponent. The 'E+' and 'e+' formats cause a plus sign to be output for positive exponents and a minus sign to be output for negative exponents. The 'E-' and 'e-' formats output a sign character only for negative exponents.

# **Date/Time format**

### С

Displays the date using the format using the Short Date Format, followed by the time using the Long Time Format. The time is not displayed if the date-time value indicates midnight precisely.

# d

Displays the day as a number without a leading zero (1-31).

# dd

Displays the day as a number with a leading zero (01-31).

# ddd

Displays the day as an abbreviation (Sun-Sat) using the strings of the Short Day Names.

# dddd

Displays the day as a full name (Sunday-Saturday) using the strings of the Long Day

Names.

# ddddd

Displays the date using the Short Date Format.

### ddddd

Displays the date using the Long Date Format.

### е

Displays the year in the current period/era as a number without a leading zero (Japanese, Korean and Taiwanese locales only).

### ee

Displays the year in the current period/era as a number with a leading zero (Japanese, Korean and Taiwanese locales only).

# g

Displays the period/era as an abbreviation (Japanese and Taiwanese locales only).

# gg

Displays the period/era as a full name. (Japanese and Taiwanese locales only).

# Μ

Displays the month as a number without a leading zero (1-12). If the m specifier immediately follows an h or hh specifier, the minute rather than the month is displayed.

### ММ

Displays the month as a number with a leading zero (01-12). If the mm specifier immediately follows an h or hh specifier, the minute rather than the month is displayed.

### ммм

Displays the month as an abbreviation (Jan-Dec) using the strings given of the Short Month Names.

### мммм

Displays the month as a full name (January-December) using the strings of the Long Month Names.

# уу

Displays the year as a two-digit number (00-99).

# уууу

Displays the year as a four-digit number (0000-9999).

# h

Displays the hour without a leading zero (0-23).

# hh

Displays the hour with a leading zero (00-23).

# m

Displays the minute without a leading zero (0-59).

### mm

Displays the minute with a leading zero (00-59).

### S

Displays the second without a leading zero (0-59).

### SS

Displays the second with a leading zero (00-59).

# z

Displays the millisecond without a leading zero (0-999).

### zzz

Displays the millisecond with a leading zero (000-999).

### t

Displays the time using the Short Time Format.

### tt

Displays the time using the Long Time Format.

### am/pm

Uses the 12-hour clock for the preceding h or hh specifier, and displays 'am' for any hour before noon, and 'pm' for any hour after noon. The am/pm specifier can use lower, upper, or mixed case, and the result is displayed accordingly.

# a/p

Uses the 12-hour clock for the preceding h or hh specifier, and displays 'a' for any hour before noon, and 'p' for any hour after noon. The a/p specifier can use lower, upper, or mixed case, and the result is displayed accordingly.

### ampm

Uses the 12-hour clock for the preceding h or hh specifier, and displays the contents of the TimeAMString global variable for any hour before noon, and the contents of the TimePMString global variable for any hour after noon.

# /

Displays the date separator character using the Date Separator.

:

Displays the time separator character using the Time Separator.

# 'xx'/"xx"

Characters enclosed in single or double quotes are displayed as-is, and do not affect formatting.

# 4.2 Supported file formats

### MS Excel 97-2003

The most popular e-table format used by Microsoft® Excel (\*.xls). The result files are fully compatible with Microsoft® Excel versions 97-2000, 2003 and XP.

### MS Access 97-2003

File of Microsoft® Access format (\*.*mdb*) with an ADO connection used.

### MS Word 97-2003

One of the most popular text processing formats used by Microsoft® Word (\*.*doc*). The result files are fully compatible with Microsoft® Word versions 97-2000, 2003 and XP.

### RTF

Rich Text Format (\*.rtf) supported by many text processing programs (e.g. WordPad).

### ITML

Hyper Text Markup Language file format (\*.*html*, \*.*htm*), complete compatibility with HTML 4.0 specification.

### PDF

A standard format in electronic publishing (\*.pdf).

• Text file
Plain text file format (\*.txt).

### CSV file

Comma-Separated Value file format (\*.csv).

### IDIF file

Data Interchange File (\*.dif) format.

# SYLK

Symbolic Links (\*.slk) file format.

**Note:** all the text formats including *Text file*, *CSV*, *DIF*, *SYLK* are usually used as working or interchange formats.

### LaTeX

A specific file format (\*.tex) which is a popular (especially among mathematicians and physicists) macroextension of TeX pack developed by D. Knut.

### 🖲 XML

A markup language for documents containing structured information (\*.xml).

### OBF

Database file format (\*.*dbf*) used by dBASE and a number of xBASE applications.

### MS Excel

The e-table format used by Microsoft® Excel (\*.xlsx).

### MS Word

The text processing format used by Microsoft® Word (\*.docx).

### MS Access

The database file format used by Microsoft® Word (\*.accdb).

### ODF Spreadsheets

OASIS Open Document Format for Office Applications - open document file format for spreadsheets (\*.ods) used by a number of applications including OpenOffice.org and KOffice.

### ODF text

OASIS Open Document Format for Office Applications - open document file format for word processing (\*.odt) documents used by a number of applications including OpenOffice.org and KOffice.

# 4.3 Configuration file format

The **configuration** (**template**) **file** used by Data Export for SQL Server is divided into several sections, each corresponding to a particular group of settings specified at different steps of the <u>GUI application</u> [28] wizard.

# [#General#]

This section stores information about the product name and its major <u>version</u> [13]. [#General#]

This section stores general information about the utility:

# [Connection]

This section contains parameters for <u>connecting</u> so the server: *Host*, *Login*, *Password* (encrypted). These parameters are obligatory.

Note that parameter *DBName* used in previous versions is no more obligatory. You can set databases for each table and query separately in the [*Databases*] section.

# [Tables]

This section contains the list of database tables at the export in the following format: =

e.g. table1=Country table2=Employee

This section may be empty.

# [Queries]

This section contains the list of <u>queries</u> [35] and their identifiers (used while loading queries into the wizard application) in the following format: <query key>=<query identifier> e.g.

query1=CountryQ

# [SQL\_<query key>]

Sections of this type contain query text for each query. The lines must be specified in the following format: Item\_0=<query line 1> Item\_1=<query line2> etc.

See the example below: [Queries] query0=Query\_0 [SQL\_query0] Item\_0=select name, capital Item\_1=from countries Item 2=where continent = 'South America'

This section may also be empty, but remember that if you do not specify any table or query, no data are exported.

# [Files]

This section lists files for data export in the following format: =<filename> <query key>=<filename> etc.

You can specify either full paths or relative paths, e.g. table1=table1.xls or query1=C:\Exported data\query1.docx

Note that you must specify the file extension properly to receive data in the required format. Otherwise, extension *.xls* is taken by default.

# [Databases]

This section allows you to specify a database for each table and query in the following format:

=<database name> <query key>=<database name>

If you do not specify a database for a table or a query, the database name for this table or query is taken from the *DBName* parameter value of the *[Connection]* section.

# [Templates]

This section specifies template files for each table or query. This template (\*.exp) file is generated by the utility with the configuration (\*.cfg) file and contains various export settings: export type, result filename, fields for export, number of records to export, specific Excel, RTF, HTML, or other options and more.

The section has the following format: =<template filename> <query key>=<template filename> etc.

You can specify either full or relative file paths, e.g. table1=template1\_xls.exp or query\_clients=D:\Templates\template2\_rtf.exp

If you do not specify any file name in the [Files] section, it is taken from the template. If you specify neither file name, nor

template for table or query, then the *.xls* filename is taken by default for tables, or *<query key>.xls* for queries.

You can set arbitrary table or query keys in the **[Tables]**, **[Queries]**, **[Files]**, **[Databases]** and **[Templates]** sections, but they MUST NOT contain spaces and they MUST be identical in different sections.

### 117 Data Export for SQL Server

# 4.4 Using query parameters

Both the <u>GUI Wizard</u><sup>[27]</sup> and the <u>console version</u><sup>[106]</sup> of Data Export for SQL Server support parameters in a query.

For example, you export data from a table named *table1* and at <u>Step 3</u> of the <u>GUI</u> 27 version of the utility you specify the following query, e.g. *Query\_0*:

SELECT \* FROM table1 WHERE field1 > :param0

Then you need to save the <u>template</u> [96] file which will be used in the <u>console version</u> [106] of the utility. To set the parameter value when using the <u>console version</u> [106], you need to specify the following command in the command line (if you run the console version from the program installation directory and the <u>template</u> [96] file is also located in this directory):

*MsExportC.exe TemplateFile* -*Query\_0:param0=5* where 5 is the query parameter value

If you export data from multiple queries, you need to specify the following command in the command line:

*MsExportC.exe TemplateFile* -*Query\_0:param0=5* -*Query\_1:param1=10* -*Query\_2: param2=15* where 5, 10, 15 are the guery parameter values
