1 Welcome to DB Comparer for Oracle!

DB Comparer for Oracle is an excellent tool for comparing Oracle databases and discovering differences in their structures. You can view all the differences in compared database objects and execute an automatically generated script to eliminate all or selected differences. A simple and intuitively comprehensive GUI allows you to work with several projects simultaneously, define comparison parameters, and alter modification scripts. Many other features are implemented to make your work with our database comparison tool easy and fast.

Visit our web-site for details: <u>https://www.sqlmanager.net</u>

Key features

- Comparing and synchronization of databases or schemas on different servers as well as on a single server
- Comparing all database objects or selected ones only. Comparing by all or by selected properties of objects only
- Visual representation of differences between databases with details and modification scripts for the different objects
- Ability to synchronize databases manually step by step or automatically
- Ability to generate reports with database differences. Possibility to add custom reports
- Ability to automate the database comparison and synchronization using the console application
- Working with several compare projects at once
- Saving and loading projects with all their parameters
- A wide variety of options for comparison and synchronization
- Built-in SQL Script editor with syntax highlight
- Easy-to-use user interface with dark schema support
- Latest Oracle versions support

and more...

1.1 What's new

7

Version

DB Comparer for Oracle 5.2

Release date February 12, 2025

What's new in DB Comparer?

• Check for program updates added.

- All objects are now shown after re-compare, not only modified ones.
- The position of the main program window is restored on restart now.
- The error occurred on switching some keyboard layouts. Fixed now.
- Other minor improvements and fixes.

1.2 System requirements

8

- Microsoft Windows XP, Microsoft Windows Server 2003, Microsoft Windows Server 2008, Microsoft Windows Server 2008 R2, Microsoft Windows Server 2012, Microsoft Windows Server 2012 R2, Microsoft Windows Server 2016, Microsoft Windows Server 2019, Microsoft Windows Vista, Microsoft Windows 7, Microsoft Windows 8/8.1, Microsoft Windows 10, Microsoft Windows 11, Microsoft Windows 11 ARM
- 512 MB of RAM or more
- 50 MB of available HD space for program installation
- Oracle Client 8.1.7 or higher (its bit depth must be the same as the program's)
- Possibility to connect to any local or remote Oracleserver
- Supported Oracle server versions: from 8.1.7 up to 21C

1.3 Installation

9

If you are installing DB Comparer for Oracle for the first time on your PC:

- download the DB Comparer for Oracle distribution package from the <u>download page</u> available at our site;
- unzip the downloaded file to any local directory, e.g. C:\unzipped;
- run *OraComparerSetup.exe* from the local directory and follow the instructions of the installation wizard;
- after the installation process is completed, find the DB Comparer shortcut in the corresponding group of Windows Start menu.

If you want to **upgrade an installed copy of DB Comparer for Oracle** to the latest version:

- download the **DB Comparer for Oracle** distribution package from the <u>download page</u> available at our site;
- unzip the downloaded file to any local directory, e.g. C:\unzipped;
- close DB Comparer application if it is running;
- run *OraComparerSetup.exe* from the local directory and follow the instructions of the installation wizard.

1.4 Registration

10

All purchases are provided by **PayPro Global** registration service. The **PayPro Global** order process is protected via a secure connection and makes on-line ordering by credit/ debit card quick and safe.

PayPro Global is a global e-commerce provider for software and shareware sales via the Internet. It accepts payments in US Dollars, Euros, Pounds Sterling, Japanese Yen, Australian Dollars, Canadian Dollars or Swiss Franks by Credit Card (Visa, MasterCard/EuroCard, American Express, Diners Club), Bank/Wire Transfer.

If you want to review your order information, or you have questions about ordering or payments please visit our <u>PayPro Global Shopper Support</u>, provided by **PayPro Global**.

Please note that all of our products are delivered via ESD (Electronic Software Delivery) only. After purchase you will be able to immediately download the registration keys. Also you will receive a copy of registration keys by email. Please make sure to enter a valid email address in your order. If you have not received the keys within 2 hours, please, contact us at sales@sqlmanager.net.

*EMS Maintenance Program provides the following benefits:

- Free software bug fixes, enhancements, updates and upgrades during the maintenance period
- Free unlimited communications with technical staff for the purpose of reporting Software failures
- Free reasonable number of communications for the purpose of consultation on operational aspects of the software

After your maintenance expires you will not be able to update your software or get technical support. To protect your investments and have your software up-to-date, you need to renew your maintenance.

You can easily reinitiate/renew your maintenance with our on-line, speed-through Maintenance Reinstatement/Renewal Interface. After reinitiating/renewal you will receive a confirmation e-mail with all the necessary information.

MySQL

14

SQL Management Studio for MySQL

EMS SQL Management Studio for MySQL is a complete solution for database administration and development. SQL Studio unites the must-have tools in one powerful and easy-to-use environment that will make you more productive than ever before!

<u>SQL Manager for MySQL</u> Simplify and automate your database development process, design, explore and maintain existing databases, build compound SQL query statements, manage database user rights and manipulate data in different ways.

Data Export for MySQL

Export your data to any of 20 most popular data formats, including MS Access, MS Excel, MS Word, PDF, HTML and more.

Data Import for MySQL

Import your data from MS Access, MS Excel and other popular formats to database tables via user-friendly wizard interface.

Data Pump for MySQL

Migrate from most popular databases (MySQL, PostgreSQL, Oracle, DB2, InterBase/Firebird, etc.) to MySQL.

Data Generator for MySQL

Generate test data for database testing purposes in a simple and direct way. Wide range of data generation parameters.

DB Comparer for MySQL

Compare and synchronize the structure of your databases. Move changes on your development database to production with ease.

DB Extract for MySQL

Create database backups in the form of SQL scripts, save your database structure and table data as a whole or partially.

SQL Query for MySQL

Analyze and retrieve your data, build your queries visually, work with query plans, build charts based on retrieved data quickly and more.

Data Comparer for MySQL

Compare and synchronize the contents of your databases. Automate your data migrations from development to production database.

2 Managing projects

DB Comparer for Oracle allows you to create, save and open saved *projects*. To start working with the program you need to <u>create the project</u>. You can <u>modify options</u> of an existing project any time your work with it.

<u>Creating project</u> <u>Opening / saving project</u> <u>Compare Project wizard</u>

See also: Working with project SQL Script editor Reports management DB Comparer options Console application

2.1 Getting started

To start working with DB Comparer for Oracle, you should either create a new project or <u>open</u> an existing one.

To create the new project select the **Project | New Project** main menu item or use the **New Project** button on the toolbar (Ctrl+N).

Then you need to set <u>connection properties</u> for source and target databases.

See also: <u>Opening / saving Project</u> <u>Compare Project wizard</u> <u>Viewing Summary Info</u>

2.2 Opening / saving project

To open an existing DB Comparer project, select **Project | Open Project...** or use the P **Open Project...** button on the toolbar (*Ctrl+O*).

To save a DB Comparer project, select **Project | Save Project (Save Project As...**) or use the **Save Project (** \blacksquare **Save Project As**) button on the toolbar (*Ctrl+S / Ctrl+Alt+S*). In the Project Options select **Save Project** button to save the currently edited project.

If this is the first time that this project is being saved or if you select **Save Project As...**, you are to specify the path to the project file and provide a name for the project file within the **Save project options** dialog.

Console options

Synchronize databases after comparing

With this option the generated script is executed right after comparing. With this option disabled, the synchronization script is saved without executing.

Abort script executing on error

This option specifies whether the synchronization script must be aborted on the error.

Direction:

Select the database synchronization direction.

Create script file

Enable to specify the path to create a command file for Command Line or PowerShell.

Run in background mode

Enable to add the /B option and run the file in the background mode.

Analyze renamed objects

Enable to add the /A option for comparison in the console application with the Analyze

renamed objects option.

Use localization

Enable it to add the /L option and output text in the console application on the same language as in the GUI.

Output file

Specify the directory to save the text file with SQL script.

Script type

Select Batch or PowerShell type of the file with the command.

Comment

Add custom text to describe the project. This info is saved to the template file in [#Comment#] section.

<u>Creating Project</u> <u>Compare Project Wizard</u> Viewing Summary Info

2.3 Compare Project wizard

After you have created or loaded the project, the Compare Project wizard starts.

When the comparison process is finished, the project will be loaded into the DB Comparer application automatically, and you will be able to start <u>working with the project</u>.

Wizard steps

26

Setting database options Setting compare options Select objects for compare Renamed objects

See also:

<u>Getting started</u> <u>Opening / saving Project</u> <u>Viewing Summary Info</u>

2.3.1 Setting database options

Database connection properties for the source and target databases are set in the same way.

If both the source and target databases are located on the same server, you can check the **Both databases on the same server** option and set all the properties (except for the database/schema name) only once.

Source Database Connect Options	Tunneling		
Database home	OraClient21Home1_32bit 🗸 🗸	Login	HR
Database	ORTOZ ~	Password	•••••
Connect as	Normal \checkmark	Authentication	Server ~

Connect options

Database Home

Specify your Oracle Home storage for this connection.

Connect as

Select the type of connection to be established: Normal (by default), SYSDBA, SYSOPER.

Afterwards you should specify *authorization* settings: Login and Password.

After that it is necessary to specify the database you are going to work with: select **Database** name from the drop-down list (the drop-down list is only available if more than one Oracle database are registered in the TNS file).

Note: If no database are registered in Oracle Client (DB list is empty in this case), then you need to <u>add registration info manually</u>.

If you are using the EMS SQL Management Studio for Oracle version of DB Comparer for Oracle then the **Select registered database** button is available. Click this button to pick a database already registered in the EMS SQL Management Studio in the <u>Select Host or</u> <u>Database</u> dialog.

Tunneling

To setup the connection via **SSH tunnel**, input the following values in the corresponding fields:

- SSH host name is the name of the host where SSH server is running
- **SSH port** indicates the port where SSH server is activated
- **SSH user name** stands for the user on the machine where SSH server is running (**Note:** it is a Linux/Windows user, not a user of Oracle server)
- SSH password is the Linux/Windows user password

Note: When the SSH tunneling is set the '*' symbol appears on the tab header.

W Use Private Key for authentication

Check this option to enable Private Keys usage for the connection.

For details see <u>SSH tunneling options</u>.

When done, press the **Next** button to <u>set compare options</u>.

Next step >

See also: Setting database options Setting compare options

2.3.1.1 Selecting registered database

Use this dialog to select a database for comparison. This dialog is available only in EMS SQL Management Studio version of DB Comparer for Oracle.

🖃 🧔 Group1	
ORTOZ on Group1	
OLACOL on Group1	
🖳 🖳 💛 on Group1	
	.
<u> </u>	<u>H</u> elp
ORTOZ on Group1	

All databases registered in EMS SQL Management Studio for Oracle are displayed in the list.

Select the necessary database and click the **OK** button.

Database registration information will be filled on the <u>first step</u> automatically.

2.3.2 Setting compare options

Set comparison options for the project.

Compare Project Wizard -[New Project]*			- 0	×
Select object types for comparison and set their properties.	Apply filters	and I	lack lists if needed.	
Compare options Full datababase comparing Source Schema			Schema to schema Target Schema	
DB Comparer for Oracle	script		Analyze renamed objects Show objects list Compare invalid objects

Tables	are differen	v t, res	ult script may be incorrect. < <u>B</u> ack <u>Compare</u> Cance	el

Compare options

Here you can specify whether to perform *Full database* or *Schema to schema* comparing. In the latter case select *Source* and *Target* schemas by clicking the ellipsis button of the corresponding controls.

Case sensitive comparing

Enable this option to make the comparing process case sensitive. Note that you can use a **Case sensitive** filter as well, just turn on the corresponding option.

Compare broken objects

Enable this option to allow the utility to compare broken or invalid objects.

Analyze renamed objects

This option enables/disables comparing tables and fields which might have been renamed.

Show objects list

If this option is checked the list of all objects is displayed on the next step. If there is no need to check the list of retrieved objects you can uncheck this option to speed up comparison process.

Add comments to generated script

Use this option to toggle comments in modification script.

Show storage parameters

This option enables/disables comparing of storage parameters for objects.

Select object type in the **Database object** tree, set a flag to include the object type into the comparison process.

The **Select All** and **Unselect All** buttons in the popup menu are implemented to make option selection easier.

Compare Options

Define which properties are compared for the selected object type.

Filter Options

For your convenience the filter of object names is added. By default, *filter by mask* is used. A valid mask consists of literal characters, sets, and wildcards. Each literal character must match a single character in the string. The comparison to literal characters is case-insensitive. Each set begins with an opening bracket ([) and ends with a closing bracket (]). You can use standard wildcards such as asterix (*) or percent sign (%) which are the same, or the question mark (?).

		Table	s Compare Options	
Compar	e Options	Filter Options*		
Filter	<u>!</u> Т*

				\vee

To apply filter using regular expression, check the **Regular expression** option.

Enable **Case sensitive** option to make the regular expression filter case sensitive.

Always exclude following objects

Enter the objects (one on the line) that you do not want to be compared.

To delete filter condition you may use the **Clear Filter** button of the **Database objects** popup menu.

< Previous step

See also: Setting database options Setting compare options

2.4 Viewing Summary Info

After you have <u>created/opened</u> a project, the selected databases/schemas are analyzed for differences. The **Progress** window displays the total progress of the comparison process and the sequence of operations performed by the utility appears.

[16:23:29] - Analyzing objects: Scheduler Job Classes [16:23:29] - Analyzing objects: Scheduler Window Groups	^
16:23:29] - Analyzing objects: Scheduler Programs (16:23:29] - Analyzing objects: Scheduler Chains (16:23:29] - Analyzing objects: Scheduler Job Classes (16:23:29] - Analyzing objects: Scheduler Window Groups	^

- Execute all scripts
- 🛉 🖊 🛊 🌷 change <u>script</u> order

Layout

Use this drop-down list to specify a name for current positional layout of the windows. If necessary, you can click the \square **Save Layout** toolbar button to save the layout for future use, or the **X Remove Layout** toolbar button if you do not need the current layout any longer.

See also:

Managing projects SQL Script editor Reports management DB Comparer options Console application
3.1 Browsing database tree

The **Database Tree** contains the objects of both databases and is situated on the left (by default). It displays objects of both (source and target) databases side by side.

Database Tree consists of four major groups:

Different (objects are to be modified to become identical with the same objects in the source/target databases)

Only Source (objects that exist in the source database, but do not exist in the target database)

Only target (objects that exist in the target database, but do not exist in the source database)

Identical (objects in the source database coincide with the ones in the target database)

Numbers in brackets next to the captions of the group nodes denote the amount of objects inside each group.

The objects which are identical in both databases are displayed in black (by default). You can customize all the colors using the <u>Colors</u> section of the <u>Environment Options</u> dialog.

If **Forward Navigation** is enabled within the Project Options section of the <u>Environment</u> <u>Options</u> dialog, upon selecting an element in the Database Tree the corresponding entry will be selected in the <u>Modification scripts</u> window.

Note: You can expand and collapse lists of objects quickly using the context menu. Moreover, the context menu of the **DB Tree** allows you to open the appropriate modification scripts in <u>SQL Script Editor</u>. 38

To refresh the **Database Tree**, use the corresponding **Refresh** button on the toolbar or press *Ctrl+F5*. To refresh a selected group of objects only, right-click the node and select the corresponding context menu item (e.g. *Refresh tables* if you want to refresh the **Tables** group).

The **context menu** of the <u>DB Tree</u> allows you to:

- **Provide Set of the set of the**
- refresh all objects of the type (depending on the current selection in <u>DB Tree</u>);
- open a simple printing report of the tree;
- expand/collapse the selected node in the tree;
- enable <u>Forward Navigation</u> for the project.

See also:

Viewing Summary Info Viewing Objects Definition Information window Working with Modification Scripts Switching windows

3.2 Viewing objects definition

The **Source Object Definition** and the **Target Object Definition** windows contain the DDL structure (Data Definition Language) of the source and target database objects. This area is read-only, hence you cannot modify object definitions using **Object Definition** windows.

For your convenience visual representation of definition differences is implemented: you can see the corresponding DDL differences highlighted in both **Object Definition** windows. If necessary, you can customize the colors using the <u>Colors</u> section of the <u>Environment</u> <u>Options</u> dialog.

Note: You can show/hide these windows using the **View | Source Object Definition** and the **View | Target Object Definition** main menu items.

Use the arrow buttons to quickly get to the **Next\Previous** or **First\Last** difference.

Popup menu

Use **Synchronization** to synchronize scrolling of the contents in both windows (i.e. when you scroll through one DDL text, the other scroll bar moves synchronously).

Use **Copy Object Definition** to copy the DDL displayed within the area to Windows clipboard.

See also: <u>Viewing Summary Info</u> <u>Browsing Database Tree</u> <u>Information window</u> <u>Working with Modification Scripts</u> <u>Switching windows</u>

3.3 Information window

The **Information** window displays detailed information on the database objects being compared.

In	formation		
N	ame	Master	
٠	Schemas		
٠	Tables	total: 15, different: 2, master: 11, target: 1, equal: 1	
٠	Views	total: 1, different: 0, master: 1, target: 0, equal: 0	Ξ
٠	Procedures	total: 2, different: 0, master: 2, target: 0, equal: 0	
٠	Functions		
٠	Database Triggers		
٠	Packages		
٠	Package Bodies		
٠	Sequences	total: 3, different: 0, master: 3, target: 0, equal: 0	
٠	Clusters		
٠	Materialized Views		
٠	Materialized View Logs		
٠	Synonyms		-

Depending on the current selection in <u>DB Tree</u>, the **Information** window either lists the total count of different objects in the source and the target database (if a group of objects is selected in <u>DB Tree</u>) or contains the complete list of properties of the source object as compared to the corresponding object in the target database (if a particular object is selected in <u>DB Tree</u>).

HR.DEPT [SCOTT.DEPT] Dif	ferent		
Name	Master	Target	
Comment			
Is Materialized View Table	No	No	
 Physical Attributes 	<complex value=""></complex>	<complex value=""></complex>	
 Parallel Parameters 	<complex value=""></complex>	<complex value=""></complex>	=

If an object property in the source database /schema differs from an object property in the target database /schema, it is highlighted (red by default) in the **Information** window.

Use the 🖛 button to hide identical objects.

See also:

Viewing Summary Info Browsing Database Tree Viewing Objects Definition Working with Modification Scripts Switching windows

3.4 Working with modification scripts

The **Modification scripts** window displays differences between the database objects as a row of modification scripts.

To change the direction of synchronization switch between **Source to Target** and **Target to Source** tabs of the **Modification scripts** window.

Script type

According to the kind of difference between objects in the Source and the Target databases, DB Comparer generates the following modification scripts:

ALTER script: if there are different objects with the same name in the Source and the Target databases, script of this type is generated to eliminate the differences;
 CREATE/ADD script: if an object exists in the Source database and it does not exist in the Target database, script of this type is generated to create the object in the Target database;

DROP script: if an object exists in the Target database and it does not exist in the Source database, script of this type is generated to drop the object in the Target database.

Note: Synchronization is always performed in one direction (i.e. in one database) depending on the tab selected.

Note: To change the height of the script entries, use the **List of modify scripts** group of options available within the <u>Preferences</u> section of the <u>Environment Options</u> dialog.

Note: multiple selection of script entries is possible with the *Ctrl* and *Shift* keys used.

The **context menu** allows you to:

- find the object (the one used in the selected script) in <u>DB Tree;</u>
- \$\vec{e}{2} execute\$ the selected modification script(s);
- <u>execute</u> all modification scripts of the project;
- Dependence of the selected modification script(s) in <u>SQL Script Editor;</u>
- dependent of the project in <u>SQL Script Editor</u>;
- locopy the text of the selected script(s) to Windows clipboard.

3.5 Switching windows

46

The **Windows Toolbar** allows you to switch between child windows easily, like in Windows Task Bar.

To activate the window you need, simply click one of the window buttons.

C:\DBComparerProjects\ora.ocp Project [ora] Project [Project4] SQL Script Editor [Project4]

See also: <u>Viewing Summary Info</u> <u>Browsing Database Tree</u> <u>Viewing Objects Definition</u> <u>Information window</u> <u>Working with Modification Scripts</u>

4 SQL Script editor

SQL Script Editor allows you to edit and execute SQL scripts for modifying compared databases.

How to open SQL Script Editor

- Use **Open all scripts in SQL Script Editor in the** <u>DB Tree</u> popup menu or on the toolbar.
- Double-click the modification script in the list or select the corresponding item of the context menu.
- Use Edit --> New SQL Editor from the main menu.

How to work with the script

The **Database** combo-box allows you to switch source/target databases/schemas where the script is to be executed.

Use **Save to file** button to save the current script.

Use **b** Load from file button to load the script from *.sql file.

Press the **Execute** toolbar button (or *F9*) to execute the script.

For your convenience the *syntax highlight, code completion* and a number of other features are implemented. If necessary, you can enable/disable or customize most of SQL Script Editor features using the <u>Editor Options</u> dialog.

You can set the delay for code completion within the <u>Quick code</u> section or manually activate the completion list using the *Ctrl+Space* shortcut.

F	Markers Toggle Bookmarks	Collect Marker

	Owiek Cada			
	QUICK Code			
	2	Cut Copy Paste Select All P Eind Replace Search Next Incremental Search Load	Cut Copy Baste Select All Find Replace Search Next Incremental Search Save	Cut Copy Baste Select All Find Beplace Search Next Incremental Search Isau Save

The **context menu** of SQL Script Editor area contains most of the standard textprocessing functions (*Cut*, *Copy*, *Paste*, *Select All*) and specific functions for working with the script:

- the *Quick Code* submenu allows you to select a character, to toggle comments, to change case of currently selected text and to manage indents;
- saving and loading options;
- numerical bookmarks to make navigation within the script easier. Use the Toggle
 Bookmarks context menu item to select a number to label the current code line. If you want to jump to a bookmark, select the Goto Bookmarks context menu item and pick one of the existing bookmarks within the submenu;
- the Go to Line Number item allows you to jump to the specified line;
- you can drop marker (F2), collect marker (ESC) or swap markers (last dropped marker will be moved to the current cursor position, and the cursor will be set to the initial marker position);

• implementation of the Find Text and the Replace Text dialogs contributes to more efficient work with the SQL code.

The **Log** area displays errors and messages on script execution. You can toggle displaying of errors and **A** warnings with the corresponding buttons.

5 Reports management

DB Comparer for Oracle provides <u>Report Designer</u> for creating powerful reports.

By default, the **Reports** panel is located on the right side of the project window. It has some <u>sample reports</u> which cannot be edited. Using its toolbar buttons you can create, delete, view and edit custom reports.

- <u>Report Designer</u>
- <u>Sample reports</u>

5.1 Report designer

53

Report Designer allows you to create and edit reports. This tool is opened when you create a report in the **Reports** window or select any of the existing reports for editing. For your convenience there are several <u>sample reports</u> available.

This module is provided by FastReport (<u>http://www.fast-report.com</u>) and has its own help system. Press **F1** key in the **Report Designer** to call the **FastReport** help.

Please find the instructions on how to create a simple report in **Report Designer** below:

Adding bands

- proceed to the Page1 tab of Report Designer;
- select the **Insert Band** component on the toolbar (on the left);
- select the band to be added to the report;
- click within the working area the corresponding element appears in the area;
- set element properties within the **Properties Inspector**.

Note: The **Properties Inspector** panel that allows you to edit report object properties can be shown/hidden by pressing the **F11** key.

		port - Report1.fr3 t Report View H	elp

Canti		Vertical bands		- 	Page1		Þ		Create caption
Centir	neter	s 0,24; 10,87			Page 1				

Adding report data

- proceed to the **Data** tab within the panel on the right side of the window;
- pick an element within the **Data** tree and drag it to the working area;
- add all necessary elements one by one using drag-and-drop operation for each of them.

Viewing the report

To preview the newly created report, select the **Project | Preview** main menu item or use the corresponding \square **Preview** toolbar button. You can also use the *Ctrl+P* shortcut for the same purpose. This mode allows you to view, edit and print the result report.

To print the report, use the report toolbar button or the corresponding context menu item.

56

Saving the report

When all report parameters are set, you can save the report to an external *.fr3 file on your local machine or in a machine in the LAN.

To save the report, select the Project | Save main menu item or use the corresponding

Save Report toolbar button. You can also use the *Ctrl+S* shortcut for the same purpose.

5.2 Sample reports

58

There are several sample reports implemented in <u>Report Designer</u>: Detailed Info, Summary Info with Chart, Summary Info.

Sample reports can be accessed from the utility toolbar or from the **Reports** panel on the right side.

Detailed info

This sample report provides you with the complete list of compared database objects with their DDL, properties and their values.

6 DB Comparer options

DB Comparer for Oracle provides full customization of the program interface, windows behavior, various options of all tools and more. This chapter informs you how to use these options.

Environment Options

General options: environment style, confirmations, project options, compare options, fonts, colors and more.

Editor Options Customizing of the <u>SQL editing tool.</u>

Keyboard Templates

Managing keyboard templates for quicker typing regularly used expressions in <u>SQL editor</u>.

Selecting program language

See also:

Managing projects Working with project SQL Script editor Reports management Console application

6.1 Environment options

Environment Options allow you to customize general options of the DB Comparer application.

To open the **Environment Options** window, select the **Options | Environment Options...** main menu item, or use the **beavironment Options** button on the main toolbar.

Preferences Confirmations Compare Options Languages Colors

The **Default** button located at the bottom of the **Environment Options** form can be used to set option values to defaults.

See also:

Editor Options Keyboard Templates

6.1.1 Preferences

Schema

Select the main color theme for the application: Light, Blue or Dark.

General

Save passwords

If this option is checked, database connection passwords are saved in project files.

Show object related scripts only

If this option is checked then the script of only selected in <u>DB Tree</u> object is displayed in the <u>Modification scripts</u> window.

Hide identical objects

This option can be used to hide the identical objects in <u>DB Tree</u>. It makes navigation easier and may increase the navigation speed.

Load connection info for new projects

This option can be used to insert the latest used login automatically when <u>creating a new</u> <u>project</u>.

Load last password for new projects

This option can be used to insert the latest used password automatically when <u>creating a</u> <u>new project</u>.

Reports directory

Use the B **Explorer** button to specify the directory where DB Comparer <u>reports</u> will be stored by default.

ironment Options	
Preferences	Preferences
Confirmations Compare Options Languages Colors	Schema Blue (* restart required) Project options
<u>D</u> efault	OK Cancel Help

List of modified scripts

Row auto height

If this option is selected, script row height in the <u>Modification Scripts</u> area is adjusted to the content automatically.

Max row line count

Defines the maximum number of lines displayed in each script row in the <u>Modification</u> <u>Scripts</u> area.

Fonts

Application font

Defines the font used by DB Comparer for Oracle. Select the font name from the drop-

down list of available system fonts.

Application font size

Defines the font size used by DB Comparer for Oracle. Type in or use the spin editor to specify the required value.

The box below displays the sample text with the selected font applied.

See also:

<u>Confirmations</u> <u>Compare Options</u> <u>Languages</u> <u>Colors</u>

6.1.2 Confirmations

Confirm exit from DB Comparer for Oracle

If this option is set, you are prompted for confirmation each time when you exit the application.

Recompare object after executing the script

The process of re-comparing objects starts automatically right after execution of the modification script.

Autosave project before closing

Disables/enables a confirmation window that appears upon closing the project. If the option is checked, modifications made in the project are saved automatically.

Show summary after comparing

Toggles displaying the <u>Summary Info</u> window that appears after the comparison process is finished.

ironment Options	:
Preferences	Confirmations
Confirmations Compare Options Languages Colors Colors	 ☐ Confirm exit from Database Comparer for Oracle ☐ Recompare objects after executing the script ☐ Autosave project before closing ☑ Show summary after comparing ☑ Show message after successfull executed script ☐ Close progress dialog after successful completion ☑ Confirm close project
<u>D</u> efault	OK Cancel Help

Show message after successfully executed script

Toggles the Script executed successfully message upon successful script execution.

Close progress dialog after successful completion

If this option is selected, the project dialog is closed automatically when the operation is completed successfully.

Confirm close project

If this option is set, you are prompted for confirmation each time when you exit the project.

See also: <u>Preferences</u> <u>Compare Options</u> <u>Languages</u> <u>Colors</u>

6.1.3 Compare options

Set specific parameters of comparison for each type of database objects.

Compare options

Here you can specify whether to perform *Full database* or *Schema to schema* comparing. In the latter case select *Source* and *Target* schemas by clicking the ellipsis button of the corresponding controls.

Select an object type in the **object tree**, set a flag to include the object type into the comparison process and define **Compare properties** in the corresponding group within the **Compare Options** tab.

The **Script generation** group allows you to specify whether a specific type of script (*CREATE*, *ALTER*, *DROP*) should be generated for objects of the selected type.

The **Select All**, **Unselect All** and **Invert Selection** buttons are implemented to make options selection easier.

	Tables	v		

Case sensitive comparing

Enable this option to make the comparing process case sensitive.

Compare broken objects

Enable this option to allow the utility to compare broken or invalid objects.

Analyze renamed objects

This option enables/disables comparing databases object which might have been renamed.

Show objects list

If this option is checked the list of all objects is displayed on the next step. If there is no need to check the list of retrieved objects you can uncheck this option to speed up comparison process.

Add comments to generated script

Use this option to toggle comments in modification script.

Show storage parameters

This option enables/disables comparing of storage parameters for objects.

You can also set filtering criteria for objects to be compared. Use the **Filter options** tab for that purpose. For details see <u>Setting compare options</u>.

See also:

Preferences Confirmations Languages Colors

6.1.4 Languages

You can create your own *.*Ing* files similar to those available in the %program_directory% \Languages folder, add them to the list of available languages and set the new language as the program interface language.

Default directory

Use the blue button to specify the directory where the *.*lng* files are to be stored by default.

Choose program language

Use the drop-down list of available languages to select the interface language to be applied to the application.

Preferences	Languages						
Confirmations	Default directory		C:\Program Files (x86)\EM	S\DB Comparer for Oracle\Languages

Preferences Confirmations Compare Options Colors

6.1.5 Colors

This section of the **Environment Options** dialog allows you to set colors of various elements used in your <u>project</u>:

General colors used in <u>DB Tree</u> (Identical objects, Non-identical objects, Unique source objects, Unique target objects, Non-identical properties) and <u>Definition View</u> colors (Non-identical lines, Deleted lines, Added lines, Additional lines).

🛛 🗹 Preferences	Colors		
Confirmations	General Identical objects	\$0000000

Environment Options Keyboard Templates

6.2.1 General

Auto indent

If this option is checked, each new indention is the same as in the previous line in <u>SQL</u> <u>Script Editor</u>.

Indents and outdents are used in the process of text editing to make the source code easier to read.

Insert mode

If this option is checked, the insert symbols mode is on by default.

W Use syntax highlight

Enables syntax highlight in the editor area.

Find text at cursor

If this option is checked, the **Text to find** field in the <u>Find Text</u> and the <u>Replace Text</u> dialog windows is automatically filled with the text the cursor is set over.

Always show hyperlinks

If this option is checked, hyperlinks are displayed in the editor window. To open a link, click it with the *Ctrl* key pressed.

Use smart tabs

If this option is checked, the tab length is variable. After pressing the *Tab* key the cursor aligns with the nearest first (or last) position of the neighboring line.

Editor Options		×
General Display Color Quick Code	General Editor options Auto indent Insert mode Use syntax highlight Find text at cursor Always show hyperlinks Use smart tabs Tab stops Undo limit 50	
Default	<u>O</u> K <u>C</u> ancel <u>H</u> elp	

Tab stops

Defines the tab length used when editing SQL text.

Undo limit

Defines the maximum number of changes that can be undone.

	Non-identical lines	\$00CBFFCA
	Deleted lines	\$00E6E6FF 🗨 …
	Added lines	\$00FFE1D2
	Additional lines	\$00EEEEE 💌

Use the **Foreground color** control to open the **Color** dialog allowing you to select the required color from the palette. Click the **Background color** control to select the required color using the **Color** dialog or leave the default value (white) if no background color is necessary for the selected text fragment.

See also: General Display Quick Code

6.2.4 Quick code

Code completion

If this option is checked, then on typing the first characters in <u>SQL Script Editor</u> you are offered several options for the word completion as a popup list (an analogue of the *Code Insight* list in Delphi IDE). The code completion list popups after a delay defined by the **Delay** option.

Code parameters

If this option is checked, the Delphi-like hint for key words is enabled.

Delay (sec)

Using this option you can change the time for code completion popup.

Sort column names

Enable sorting of objects in the popup menu by name.

Keyboard templates

Use keyboard templates

Allows you to use keyboard templates for faster typing of regularly used expressions (see <u>Keyboard templates</u>).

See also:

<u>General</u> <u>Display</u> <u>Color</u>

6.3 Keyboard templates

The **Keyboard Templates** window allows you to create new keyboard templates for quicker typing regularly used expressions and to edit the existing ones.

To open this window, select the **Options | Keyboard Templates...** main menu item, or use the **B Keyboard Templates** button on the main toolbar.

To add a new keyboard template, click the **Add Template...** button, set the template name and define the template expression. In the upper right area of the window you can change the **case** of the template expression.

You can deactivate an existing template by selecting it from the list on the left and removing the **Active** flag of the template.

Keyboard Ter	mplates					>	×
Active Ter 		Add Template Edit Template Delele Template		Case of Te As is Upperc Lowerd First up	ase case		
N N al N PU N		Expansion Cursor Position	A <u>u</u> tho	r	<u>T</u> ime	<u>D</u> ate	^
	Add Keyboard Ter Shortcut Name		×			>	~
<u>D</u> efaul	t	[<u>о</u> к	C	ancel	<u>H</u> elp	

If necessary, you can also edit the template name using the **Edit Template...** button, delete the template using the **Delete Template** button or edit the template expression within the **Expansion** area of the window. For faster editing you can use the *Symbols* menu and the *Author*, *Time*, *Date* buttons.

7 Console application

Additionally to **the GUI version** which is implemented in the form of a windows application, the installation package of DB Comparer for Oracle includes **the console version** which is intended for being run from Windows command line with a project file name used as the execution parameter.

DB Comparer command line utility is intended for quick metadata comparison/ synchronization of Oracle databases/schemas, which can be easily scheduled and run automatically.

Using the console application How to schedule console run

See also:

Managing projects Working with project SQL Script Editor Reports management DB Comparer options

7.1 Using DB Comparer console

All the comparison options can be <u>saved</u> in **Project** (*.*ocp*) files. A project file can be also used in the **Console version** of DB Comparer for Oracle.

For your convenience the console version of DB Comparer for Oracle is included in the distribution package of the utility. The command line utility is intended for quick database structure comparison and synchronization and further scheduling

Usage

83

<path to DB Comparer for Oracle console application>\OraComparerC.exe Projectfile
[scriptfile] [logfile] [/E] [/B] [/L]

Projectfile

Stands for the **.ocp* file to be used as the console version execution parameter. See <u>Opening / Saving Project</u> for instructions on saving project files.

Scriptfile

Specify the output file name to save the modification script generated by the utility. If not specified, the script will be saved as *Projectfile.sql* in the home directory of DB Comparer for Oracle.

Logfile

Specify the custom log file name.

/E

Execute generated script after comparison.

/L

Use the same localization in the console version as in the Wizard Application

/В

Use this parameter to run the application in the background mode. No console window will appear.

/Α

Analyze renamed objects.

Examples:

"C:\Program Files\EMS\DB Comparer for Oracle\OraComparerC.exe" DBComparer_Project.ocp Upon running the command line utility, the modification script will be generated into DBComparer_Project.sql

"C:\Program Files\EMS\DB Comparer for Oracle\OraComparerC.exe" DBComparer_ORA.ocp Result.sql Upon running the command line utility, the modification script will be generated into Result.sql

"C:\Program Files\EMS\DB Comparer for Oracle\OraComparerC.exe" DBComparer_ORA.ocp Result.sql /E Upon running the command line utility, the modification script will be generated into *Result.sql* and executed.

Note: The following exit codes can be returned by DB Comparer for Oracle to the operating system after performing the latest task:

- 0 successful completion;
- 1 error(s) occurred during task performing;
- 2 fatal error occurred. The task was not performed.

7.2 How to schedule console run

Here are the steps to schedule program run with standard Windows scheduler:

- 1. Set all options in the **Project Options** and click Save Project button.
- 2. Open the command line in Windows (type CMD in the Run... dialog).

3. Use the following command to run the console version with the saved project: cpath to DB Comparer for Oracle console application>\OraComparerC.exe Projectfile
[scriptfile] [logfile] [/E] [/B] [/L]

For example:

85

"C:\Program Files\EMS\DB Comparer for Oracle\OraComparerC.exe" DBComparer_ORA.ocp Result.sql

- 4. Launch the standard Task Scheduler tool in Windows OS.
- 5. Set the command for executing the project as described above.
- 6. Set the schedule for the command execution.
- 7. Save the scheduled task.

8 Appendix

87

8.1 Find Text dialog

The **Find Text** dialog is provided for quick and flexible searching for specified text within the <u>SQL Script Editor</u> working area.

Text to find

Enter a search string in this box. The Arrow-Down button which can be found next to the input box allows you to select any of the previously entered search strings.

Options

Case sensitive

This option can be used to differentiate uppercase characters from lowercase ones during the search process.

Whole words only

Use this option to search for words only (with this option off, the search string might be found within longer words.)

Regular expressions

Recognizes regular expressions in the search string.

For example, you can type "empl*" to search for metadata containing the "empl" substring; enter "^emp" to search for words starting with "emp" or "^emp|emp\$" to search for the string "emp" at the beginning or at the end of the string.

Note: The syntax of regular expressions that can be used in the Text to find field is similar to that used in Perl regular expressions. Comprehensive information about it can be found at http://perldoc.perl.org/perlre.html#Regular-Expressions.

Find Text	×		
Find			
Text to find ID	~		
Options	Direction		
<u>C</u> ase sensitive <u>W</u> hole words only	⊖ <u>E</u> orward		
<u>R</u> egular expressions	● <u>B</u> ackward		
Scope	Origin		
● <u>G</u> lobal	From cursor		
○ <u>S</u> elected text	○ Entire scope		
Mark search result with stack <u>m</u> arker			
OK Show <u>A</u> ll	Cancel <u>H</u> elp		

Direction

Forward

Searches from the current position to the end of the SQL Script Editor area.

Backward

Searches from the current position to the beginning of the SQL Script Editor area.

Scope

Iobal

Searches within the entire SQL Script Editor working area, in the direction specified by the *Direction* setting.

Selected text

Searches only within the currently selected text, in the direction specified by the *Direction* setting. You can use the mouse or block commands to select a block of text.

Origin

From cursor

The search starts at the cursor's current position, and then proceeds either forward to the end of the scope, or backward to the beginning of the scope depending on the *Direction* setting.

Entire scope

The search covers either the entire block of selected text or the entire script (no matter where the cursor is in the Editor area) depending upon the *Scope* options.

Mark search result with stack marker

The option toggles marking search results. If this option is selected, stack markers are set at all search positions - this makes it possible to jump from one marker (search result) to another within the text.

8.2 Replace Text dialog

The **Replace Text** dialog is provided for searching and replacing text within the <u>SQL</u> <u>Script Editor</u> working area.

Text to find

89

Enter a search string in this box. The Arrow-Down button which can be found next to the input box allows you to select any of the previously entered search strings.

Text to replace

This box allows you to enter a string to replace the search string. The Arrow-Down button which can be found next to the input box allows you to select any of the previously entered strings. To replace the search string with an empty string, leave this input box blank.

Options

Case sensitive

This option can be used to differentiate uppercase characters from lowercase ones during the search process.

Whole words only

Use this option to search for words only (with this option off, the search string might be found within longer words.)

Regular expressions

Recognizes regular expressions in the search string.

Replace with template

This option requires the **Regular expressions** option selection.

Enable this option to use regular expressions in the **Text to replace** field. Expression used in this field will be applied to each string that matches the **Text to find** expression.

Note: The syntax of regular expressions that can be used in the Text to find and the Text to replace fields is similar to that used in Perl regular expressions. Comprehensive information about it can be found at <u>http://perldoc.perl.org/perlre.html</u>.

Prompt on replace

Check this option if you wish to be prompted before replacing upon each occurrence of the search string. When this option is off, the search string is replaced automatically.

Direction

Forward

Searches and replaces from the current position to the end of the SQL Script Editor area.

Backward

Searches and replaces from the current position to the beginning of the SQL Script Editor area.

Scope

🧕 Global

Searches and replaces within the entire SQL Script Editor working area, in the direction specified by the *Direction* setting.

Selected text

Searches and replaces only within the currently selected text, in the direction specified by the *Direction* setting. You can use the mouse or block commands to select a block of text.

Origin

From cursor

The search and replace process starts at the cursor's current position, and then proceeds either forward to the end of the scope, or backward to the beginning of the scope depending on the *Direction* setting.

Entire scope

The search and replace process covers either the entire block of selected text or the entire script (no matter where the cursor is in the Editor area) depending upon the *Scope* options.

Mark search result with stack marker

The option toggles marking search results. If this option is selected, stack markers are set at all search positions - this makes it possible to jump from one marker (search result) to another within the text.

Click the **Replace All** button to replace every occurrence of the search string. If you have checked the **Prompt on replace** option, the confirmation dialog box appears upon each occurrence of the search string.

8.3 SSH tunneling options

To setup the connection via **SSH tunnel**, input the following values in the corresponding fields:

- SSH host name is the name of the host where SSH server is running
- **SSH port** indicates the port where SSH server is activated
- **SSH user name** stands for the user on the machine where SSH server is running (**Note:** it is a Linux/Windows user, not a user of Oracle server)
- SSH password is the Linux/Windows user password

W Use Private Key for authentication

If the SSH encryption is enabled on the SSH server, a user can generate a pair of cryptographic keys (the **Private key** and the **Public key**). The **Public key** is placed on the SSH server, and the **Private key** is the part you keep secret inside a secure box that can only be opened with the correct passphrase (or an empty string as the passphrase). When you wish to access the remote system, you open the secure box with your passphrase (if any), and use the private key to authenticate yourself with the Public key on the remote Linux computer.

SSH Key file

Specify the location (the secure box) of the **Private key** file on your local machine. Supported Private Key file formats are:

OpenSSH

Putty

SSH.com

Note that you need to trust your local machine not to scrape your passphrase or a copy of your Private key file while it is out of its secure box.

Passphrase dialog	×
Please enter the passphrase for the key	
OK Cancel	

8.4 Customize toolbars and menus

The **Customize** dialog allows you to create and personalize DB Comparer menus and toolbars.

To call this dialog, click the down-arrow button on the right side of any toolbar, then click **Add or Remove Buttons** and select **Customize...** from the drop-down menu. Alternatively, you can right-click any toolbar and select the **Customize...** popup menu item.

Toolbars

93

This list displays all currently existing toolbars of DB Comparer (both *default* and *user-defined* toolbars). Check/uncheck the box at a toolbar name to show/hide the toolbar.

New...

Use this button to add a new user-defined toolbar to the **Toolbars** list. Set a name for the newly created toolbar and dock it by dragging it to any permitted location within the application window.

Rename...

Use this button to rename the selected user-defined toolbar.

Delete

Use this button to delete the selected user-defined toolbar.

Reset...

Use this button to reset the selected toolbar.

Commands

This tab allows you to browse the list of all commands available within the menus and toolbars of the application window. Selecting categories in the **Categories** list displays commands of the selected category (e.g. 'File' or 'Options') in the **Commands** list.

If necessary, you can pick a command and drag it to any toolbar to create a button for this command.

Options

Personalized Menus and Toolbars

Menus show recently used commands first

This option determines whether the most frequently used items will be placed in menus at first position.

If this option is enabled, frequently used menu items are "promoted" and displayed higher on the list. Unused and infrequently used menu items are visually suppressed and appear "collapsed".

Show full menus after a short delay

This option is available only if the **Menus show recently used commands first** option is selected.

If this option is enabled, infrequently used menu items (if they appear "collapsed") will be automatically expanded after a delay upon setting mouse cursor (or upon selection with the Up/Down keys) on the bottom of the menu. Otherwise, the menu expands only after clicking its bottom-most button (or using the Ctrl+Down shortcut).

Reset my usage data

Resets the lists of recently used commands in the toolbars and menus.

🖗 Customize	х
Toolbars Commands Options Personalized Menus and Toolbars Image: Menus show recently used commands first Image: Show full menus after a short delay	-

Other

✓ Large icons

This option displays larger icons on the parent window toolbars.

Show ToolTips on toolbars

If this option is selected, ToolTips (hints) popup when the mouse cursor is positioned over a toolbar button.

Show shortcut keys in ToolTips

If this option is selected, the corresponding shortcuts are displayed in ToolTips (hints) for toolbar buttons.

Menu animations

Use the drop-down list to specify the menu animation effects: *None* (no animation) *Random* (random choice: *Unfold*, *Slide*, *Fade*) *Unfold* (unfolding menus) *Slide* (sliding menus) *Fade* (menus fade in when appearing)

8.5 Advanced connection settings

97

You need the installed Oracle client on the client computer where DB Comparer for Oracle will be used. The version of the Oracle client should be compatible with the version of Oracle server you need to connect.

You need to add the connection settings of Oracle server databases to your TNS names file (tnsnames.ora file). This is a configuration file which contains databases description.

If you use Database Client the tnsnames.ora file is located in the % HOME_name\NETWORK\ADMIN directory.

If you use Instant Client for oracle, you should create the the same sora file manually. since it does not exist. File should be created in the same directory where Oracle instant client is installed (e.g. C:\OracleInstantClient\). This file can be created using any text editor (create a simple text file and then change its name and extension).

Only for Instant Client: After the tnsnames.ora file is created and database description is added, create TNS_ADMIN environment variable. For this please do the following:

1. Right-click 'My computer'.

- 2. Select 'Properties' menu item.
- 3. Proceed to the 'Advanced' tab and press 'Environment Variables' button.
- 4. Press 'New...' button in the 'System variables' section.

5. Set 'Variable name:' TNS_ADMIN, 'Variable value:' C:\OracleInstantClien\tnsnames.ora 6. Press 'OK' button to save the variable.

Find PATH variable in the same dialog, double-click it and add path to the Oracle Instant client libraries (they are located in the directory where client is installed, i.e. C: OracleInstantClient). Remember that the paths entries should be separated with semicolons (;).

DB Comparer for Oracle connects to the server (with the help of Oracle client) via TCP/IP protocol. Here is an example of TCP/IP connection specified in TNS names file:

```
DB_Alias =

(DESCRIPTION =

(ADDRESS_LIST =

(ADDRESS = (PROTOCOL = TCP)(HOST = Host_name)(PORT = 1521))

)

(CONNECT_DATA =

(SERVER = DEDICATED)

(SERVICE_NAME = Database_Name)

)
```

PROTOCOL is the keyword that identifies the specific protocol adapter used. For this protocol, the value is TCP. The value can be entered in either uppercase or lowercase. HOST is the host name or IP address. PORT is the TCP/IP port number. SERVICE_NAME the name of service on server; the database instance name may differ from the actual database name, but generally the names match. DB_Alias any name of the connection

When you <u>Set database options</u> select Oracle client HOME in **Database home** dropdown list and select database from the **Database** dropdown list. The databases names are taken from the tnsnames.ora file.

8.6 Checking for updates

99

Use Help main menu to check if the newer version of the tool has been released.
